1.2.2 Master in Business Economics

These courses have a strong analytical and quantitative focus and include research skills. A profound mathematical and statistical knowledge is required.

The subjects in the study field 'Master in Business Economics' have a modular structure. That means that the courses will be bundled in modular blocks of six weeks each.

The content of the courses are processed in a more focused and in-depth manner. The teaching methods are demanding and challenging: case studies, group assignments, discussion panels, lectures, business games, etc.

At the end of each modular block you have an exam from the previous course. During a modular block you also get interim tests and (group) assignments. As a result, you no longer have exams in January or June.

Because of the modular structure, it is difficult to include subjects from other study fields in your schedule.

The courses have a strong analytical and quantitative focus and include research skills.

1.2.3 Master in Business Engineering

The study field 'Master in Business Engineering' is a combination of business administration, data-driven management science, business processes and technology.

A business engineer may act as a mediator between technical and business economic positions to conduct data analysis, modelling and decision-making.

Different management science principles are discussed and maintained through mathematical modelling, statistics and numerical algorithms.

Since the courses have a strong focus on quantitative analytics in production, services, logistics, marketing and finance, a good knowledge of data analysis techniques, conceptual or mathematical modelling techniques and techniques of decision making are required. Additionally some course require a profound knowledge in programming.
