Keywords

Position of the course

Contents

Fundamentals of main unit operations encountered in microalgae harvesting, cells disruption and metabolites extraction will be presented. This comprises centrifugation, membrane concentration or fractionation, high pressure or bead milling cell disruption and solvent extraction.

Initial competences

Final competences

To know the available techniques, to understand their main engineering aspects and to be able to propose a process scheme for a microalgae metabolite valorization.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Extra information on the teaching methods

Students will have to manage in small group a biorafinery practical case from the photobioreactor to the fraction of interest.
