

## Data Communication (E731028)

**Course size** *(nominal values; actual values may depend on programme)*

**Credits 3.0**

**Study time 90 h**

**Course offerings and teaching methods in academic year 2023-2024**

A (semester 2)

Dutch

Gent

lecture

**Lecturers in academic year 2023-2024**

Verhaevert, Jo

TW05

lecturer-in-charge

**Offered in the following programmes in 2023-2024**

	<b>crdts</b>	<b>offering</b>
Bachelor of Science in Engineering Technology(main subject Electronics and ICT Engineering Technology)	3	A
Bachelor of Science in Engineering Technology(main subject Information Engineering Technology)	3	A
Linking Course Master of Science in Electronics and ICT Engineering Technology(main subject Electronics Engineering)	3	A
Linking Course Master of Science in Electronics and ICT Engineering Technology(main subject Embedded Systems)	3	A
Linking Course Master of Science in Electronics and ICT Engineering Technology(main subject ICT)	3	A
Preparatory Course Master of Science in Electronics and ICT Engineering Technology(main subject Electronics Engineering)	3	A
Preparatory Course Master of Science in Electronics and ICT Engineering Technology(main subject Embedded Systems)	3	A
Preparatory Course Master of Science in Electronics and ICT Engineering Technology(main subject ICT)	3	A
Preparatory Course Master of Science in Information Engineering Technology	3	A

**Teaching languages**

Dutch

**Keywords**

Data communication

**Position of the course**

The course has the following objectives:

- Learn the basics and concepts in order to gain insight in modern communication systems
- Understand and be able to analyse different real life case studies: telephone networks, xDSL, cable networks and backbone networks

**Contents**

- Setting and history of communication, description of communication systems, types of communication (types of information, geographical spreading, direction of communication, connection types, topology), OSI reference model
- Analogue and digital signals, bandwidth, sampling (Nyquist theorem) and quantising, PAM, PCM, DPCM, DM, ADPCM...
- Channel properties: transfer function, noise (types of noise, noise figure, noise temperature), signal to noise ratio, channel capacity of Shannon, amplitude distortion and phase distortion
- Electromagnetic propagation, guided waves on telephone lines (distributed parameters, attenuation), on coaxial cable (attenuation) and on optical fibre (internal reflection, fibre types, attenuation)
- Digital communication using base band channel: choice of wave form, choice of pulse form (Unipolar-Bipolar, NRZ-RZ, AMI, Manchester...), more than 2 different wave forms and digital communication using band pass channel (ASK, FSK, PSK, QAM), constellation diagram

- Multiplexing and multiple access: frequency, wave length, time (PDH, SDH, SONET), space, code (DSSS, FHSS) and combinations thereof
- Case study PSTN: analogue telephony, voice band modem, ISDN
- Case study xDSL: restrictions of copper line for xDSL, POTS-splitter, FDM-EC modems, modulation techniques, architecture, HDSL-SHDSL-ADSL2-ADSL2+-RADSL-VDSL-VDSL2
- Case study cable networks: classic cable network, two-way traffic via cable network, HFC, DOCSIS, multiple access control, cable telephone networks
- Case study computer networks: ATM, FDDI, Ethernet

### **Initial competences**

Builds upon certain final competences of the courses 'Signals and systems II'.

### **Final competences**

- 1 Understand and explain the basics of communication (with e.g. analogue and digital signals)
- 2 Analyse and interpret channel properties
- 3 Apply practically electromagnetic wave propagation: twisted pair, coax and fibre
- 4 Analyse different types of digital communication: ASK, FSK, PSK, QAM, multiplexing and multiple access
- 5 Understand and explain the design choices of modern communication networks (telephony, xDSL, HFC and backbone)

### **Conditions for credit contract**

Access to this course unit via a credit contract is determined after successful competences assessment

### **Conditions for exam contract**

This course unit cannot be taken via an exam contract

### **Teaching methods**

Lecture

### **Learning materials and price**

- Syllabus (7 euro)
- Hand-outs of the slides and additional documentation on the electronic learning environment

### **Course content-related study coaching**

The lecturer is available for further information via various channels (during and after the course, via e-mail or by appointment).

### **Assessment moments**

end-of-term assessment

### **Examination methods in case of periodic assessment during the first examination period**

Written assessment open-book

### **Examination methods in case of periodic assessment during the second examination period**

Written assessment open-book

### **Possibilities of retake in case of permanent assessment**

not applicable

### **Calculation of the examination mark**

Written assessment open-book: 100%
