

Environmental Technology: Waste (I002591)

Course size *(nominal values; actual values may depend on programme)*

Credits 3.0 **Study time 90 h**

Course offerings and teaching methods in academic year 2024-2025

A (semester 2)	English	Gent	excursion lecture
----------------	---------	------	----------------------

Lecturers in academic year 2024-2025

Ronsse, Frederik	LA24	lecturer-in-charge
Ghysels, Stef	LA24	co-lecturer

Offered in the following programmes in 2024-2025

	crdts	offering
International Master of Science in Sustainable and Innovative Natural Resource Management	3	A
Master of Science in Bioscience Engineering: Sustainable Urban Bioscience Engineering	3	A
Master of Science in Environmental Science and Technology	3	A
Exchange Programme in Bioscience Engineering: Environmental Technology (master's level)	3	A

Teaching languages

English

Keywords

Management of solid waste, material flows, recycling, reuse, thermal energy recovery, biological treatment processes of solid waste

Position of the course

The purpose of this course is to provide the students with the insight into the wide range of techniques to process solid wastes. Therein, emphasis is made – in decreasing order of importance – to reuse, materials reuse (recycling), energy recovery and disposal with respect to the aim of solid waste and material management. The technical and organizational aspects of waste prevention, transformation and disposal are dealt with from the environmental, legal and economical angle. The course aims to enable the students to formulate a well-reasoned answer to the waste and material reuse issues today's and tomorrow's society encounters.

Contents

1. Introduction
 - Material and waste flows, resource efficiency, linear versus circular economy
 - Waste and recycling policies: key concepts
2. Recycling and material reuse technology: physical unit processes
 - Densification and size reduction techniques
 - Sorting based on density, size, optical and IR properties, electromagnetic properties. Flotation and dewatering
 - Examples of some relevant recycling process designs for specific waste streams: packaging plastics and waste rubber, glass containers, e-waste, construction, demolition and wood waste.
3. Biological waste treatment processes
 - Composting
 - Anaerobic digestion
 - Biodrying
4. Thermal processing and energy recovery
 - Incineration and required flue gas treatment
 - Incinerator designs for municipal solid waste, fluid bed combustion for RDF and sewage

sludge

- Energy recovery: basic concepts

5. Landfilling

- Types of landfill

- Construction of a landfill and subsequent exploitation

- Collection of landfill gas and leachate; appropriate landfill gas valorization and leachate treatment systems

- Clean-up of disused landfill site; material reuse by landfill mining

Initial competences

Basic knowledge of chemistry, physics

Final competences

- 1 Have basic insights into solid waste material flows and their collection.
- 2 Have basic insights into the available techniques for recovery of solid waste with emphasis on maximum material reuse and/or energy recovery.
- 3 Have basic insights into the available techniques for final disposal of solid waste.
- 4 Formulate proposals to prevent, usefully reuse or dispose of a specific material or solid waste stream

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Excursion, Lecture

Extra information on the teaching methods

Theory consists of lectures. Practical examples of management of specific waste or material streams are illustrated by means of company visits.

Study material

Type: Slides

Name: Slides of the course

Indicative price: Free or paid by faculty

Optional: no

Language : English

Number of Slides : 250

Oldest Usable Edition : 2024

Available on Ufora : Yes

Online Available : Yes

Available in the Library : No

Available through Student Association : No

Course content-related study coaching

The lecturer is available during and after the lectures for questioning, feedback and guidance. Additionally, the lecturer can be consulted electronically through e-mail, or personally upon making an appointment

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written assessment with open-ended questions

Examination methods in case of periodic assessment during the second examination period

Written assessment with open-ended questions

Examination methods in case of permanent assessment

Participation, Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is possible in modified form

Extra information on the examination methods

The evaluation consists of a closed-book written exam, with open questions

Calculation of the examination mark

Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.
