Teaching languages

English

Keywords

Natural resources, environmental economics, bio-economic modeling, management models, project appraisal

Position of the course

To provide students with basic knowledge about the economics and management of the exploitation of natural resources. This is a need because the optimal use of land, water, forest and other natural resources is based on economic principles. Further, the negative and positive externalities of the use of natural resources are analysed and adapted rural development and environmental policies are discussed. Theoretical principles are illustrated by exercises and case studies. Besides the normal exercises, students are asked to do a group work in which the theory is applied to a specific contemporary problem concerning environmental pollution or natural resource management.

Contents

I. FOUNDATIONS

An introduction to natural resource and environmental economics

The origins of the sustainability problem

Ethics, welfare economics and the environment

Concepts of sustainability

Welfare economics and the environment

II. ENVIRONMENTAL POLLUTION

Pollution control: targets

Pollution control: instruments

Pollution policy with imperfect information

III. PROJECT APPRAISAL

Cost benefit analysis

Valuing the environment

IV. NATURAL RESOURCE EXPLOITATION

The efficient and optimal use of natural resources

Non-renewable resources

Renewable resources

Initial competences

Basic knowledge of general economics

Final competences

- 1 Mastering basic principles of management of natural resources
- 2 Understanding principles, models and management skills for an optimal use of natural resources and of the instruments for environmental policies.
- 3 Applying the management models for both renewable and non-renewable resources
- 4 Present, propose and analyse contemporary problems of natural resource management
- 5 Analyse and propose environmental policy instruments
- 6 Discuss and analyse possible solutions for pollution problems
- 7 Understand environmental valuation techniques

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Group work, Seminar, Lecture

Extra information on the teaching methods

Lectures provide the theoretical concepts which are deepened in both guided plenary and exercise sessions. The course is complemented with a group work in which students need to apply the theory to a specific contemporary problem concerning environmental pollution or natural resource management. This group work is presented to and discussed with the lecturers.

Study material

Type: Handbook

Name: environmental and natural resource economics

Indicative price: € 68

Optional: yes

Language : English

Author : Jonathan Harris and Brian Roach

ISBN : 978-0-36753-138-6

Number of Pages : 704

Available in the Library : Yes

Type: Slides

Name: slides of theory lectures

Indicative price: Free or paid by faculty

Optional: no

Language : English

Available on Ufora : Yes

Specific coaching on appointment by assistant.

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written assessment with open-ended questions

Examination methods in case of periodic assessment during the second examination period

Written assessment with open-ended questions

Examination methods in case of permanent assessment

Oral assessment, Peer and/or self assessment, Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is not possible

Extra information on the examination methods

For the permanent evaluation, students work together to make a presentation about a contemporary topic related to the course. After the presentation their topic will be discussed with all the group members as an oral exam.

Calculation of the examination mark

Final score = theory (50%) + exercises (20%) + group work (30%)

Students who eschew period aligned and/or non-period aligned evaluations for this course unit can obtain a score no higher than 9/20.
