**Position of the course**

Innovation processes shape both society and nature. How can people such as yourself be involved in this shaping? That is a question to which this course attempts to give some answers. Through the course, you build a good understanding of the principles behind innovation management. The focus is on two settings where you might find yourself after you graduate, namely, larger established companies and small start-up entrepreneurial companies.

**Contents**

The various steps in a business development process based on technological (innovative) ideas or new, internal or external, research results. The course discusses the challenges put on management and founders in a research-intensive company. In addition, obstacles and opportunities in bringing a new product to the market are discussed and analysed. The course focuses both on R&D and innovation processes in established, larger organisations and in small entrepreneurial start-ups. Besides theoretical knowledge of innovation processes, methods for practical project management are identified and described.

The course includes the following elements:

- \* Business concept, business plan, business development
- \* Early market development
- \* Financing R&D and new venture development in different business contexts
- \* Requirement for management in different situations in business
- \* Reward systems in knowledge-intensive companies
- \* Strategic alliances
- \* Intellectual property rights (IPR) and its role in research-based development projects
- \* R&D and innovation management in companies active within biotechnology and natural resource management

**Initial competences**

130 credits, which of 90 credits in science/engineering, including 10 credits at second cycle. Proficiency in English equivalent to the Swedish upper secondary course English 6.

**Final competences**

1 The overall objective of the course is that the student should get a good understanding of the principles behind research and development (R&D) and Innovation management in large established companies as well as in small entrepreneurial companies. The focus is on

companies active within biotech and natural resource management.

On completion of the course the student should be able to:

- analyse and value different business development processes,
- 2 • describe the challenges and requirements put on management, board members and share holders in different development situations,
- 3 • account for and value the importance of a business plan, how it is designed and applied on a technical development idea,
- 4 • plan and implement a business development project in a team,
- 5 • describe and discuss the fundamentals of intellectual property rights and legislation, value and comment its importance for companies in different development stages, particularly in companies active within biotech or natural resource management,
- 6 • reason and critically value different conditions under which an technical business idea can be developed into an innovation.

#### **Conditions for credit contract**

This course unit cannot be taken via a credit contract

#### **Conditions for exam contract**

This course unit cannot be taken via an exam contract

#### **Teaching methods**

Seminar, Lecture, Independent work

#### **Extra information on the teaching methods**

Weblectures, home assignments, workshops, project work and guest lecture(s).

#### **Study material**

None

#### **References**

Schilling, Melissa A., Strategic management of technological innovation, Fifth edition., 2017  
Articles and other texts to be distributed by teachers

#### **Course content-related study coaching**

#### **Assessment moments**

end-of-term and continuous assessment

#### **Examination methods in case of periodic assessment during the first examination period**

Written assessment, Assignment

#### **Examination methods in case of periodic assessment during the second examination period**

Written assessment, Assignment

#### **Examination methods in case of permanent assessment**

Presentation

#### **Possibilities of retake in case of permanent assessment**

examination during the second examination period is possible

#### **Extra information on the examination methods**

Written exam (7 credits). Written presentations of the project (3 credits).

If there are special reasons for doing so, an examiner may make an exception from the method of assessment indicated and allow a student to be assessed by another method. An example of special reasons might be a certificate regarding targeted pedagogical support from the disability coordinator of the university.

#### **Calculation of the examination mark**

The course examination consists of one written exam (7cr) and oral and written presentations of the project (3 cr). In order to pass the course, passing the exam and project presentations as well as prescence at all mandatory seminars are required.
