

## Sustainable Chemical Production Processes (E071131)

**Course size** *(nominal values; actual values may depend on programme)*

**Credits 6.0** **Study time 180 h**

**Course offerings and teaching methods in academic year 2025-2026**

A (semester 1)	English	Gent	excursion lecture group work	
B (semester 1)	Dutch	Gent	group work excursion	15.0h 15.0h

**Lecturers in academic year 2025-2026**

Van Geem, Kevin	TW11	lecturer-in-charge
Reyniers, Pieter	TW11	co-lecturer

**Offered in the following programmes in 2025-2026**

	crdts	offering
Bridging Programme Master of Science in Chemical Engineering	6	A
Master of Science in Electromechanical Engineering(main subject Control Engineering and Automation)	6	A
Master of Science in Electromechanical Engineering(main subject Electrical Power Engineering)	6	A
Master of Science in Electromechanical Engineering(main subject Maritime Engineering)	6	A
Master of Science in Electromechanical Engineering(main subject Mechanical Construction)	6	A
Master of Science in Electromechanical Engineering(main subject Mechanical Energy Engineering)	6	A
International Master of Science in Sustainable and Innovative Natural Resource Management	6	A
Master of Science in Chemical Engineering	6	B
Master of Science in Chemical Engineering	6	A

**Teaching languages**

English, Dutch

**Keywords**

Sustainability, petroleum refining, Petro chemical processes, biotechnology, oil, coal, natural gas, biomass, lifecycle analysis, cleantech, process economics, CO<sub>2</sub> storage, CO<sub>2</sub> utilisation

**Position of the course**

Introduction to the most important chemical and petrochemical processes for the production of fuels, base and bulk chemicals. Particular attention is paid to technical, economical and environmental aspects. Getting insight into the technical-scientific basis for these processes and in the structure of the chemical industry, petroleum refining industry, the petrochemical industry, biotechnology, biorefinery.

**Contents**

- Structure of the chemical industry
- Resources, process efficiency, waste, life cycle analysis, exergy
- Conversion of oil, biomass and coal. Production of fossil and renewable fuels. Overview of the final products
- Sustainable production of Base Chemicals: hydrogen; carbon monoxide, ethene;

propene; butenes; butadiene, Benzene; toluene; sustainable xylenes, acetic acid, sulfuric acid, ammonia, methanol, etc.

- Sustainable production of second generation chemicals: Styrene, Hetero-atom: vinylchloride, Ethylene Oxide, Adipic Acid, Caprolactam, Maleic Anhydride
- Important sustainable Processes: capita selecta: Steamreforming of natural gas; partial oxidation to synthesis gas or ethyne, Steam Cracking, Catalytic cracking; Catalytic reforming, High-Pressure Polyethylene, bioethanol
- Plant visits: unit operations, sustainability, economics, continuous versus batch processes

#### **Initial competences**

Physical & Organic Chemistry, Heat and Material Transport, Unit Operations in the Chemical Industry

#### **Final competences**

- 1 Understanding the following concepts: crude oil, distillate, residue, bulk chemicals, sustainability, life cycle analysis, biomass, process simulation, CO<sub>2</sub> emissions
- 2 Obtain insight in the structure of chemical industry.
- 3 Obtain insight in the structure of a refinery.
- 4 Obtain insight in production methods of important chemicals.
- 5 Obtain insight in production of selected second generation chemicals.
- 6 Obtain insight in implementation of large-scale processes.
- 7 Evaluation of process efficiency and sustainability.
- 8 Identification of the most important streams in a refinery and treatment processes.
- 9 Process simulation.
- 10 Process economics.

#### **Conditions for credit contract**

Access to this course unit via a credit contract is determined after successful competences assessment

#### **Conditions for exam contract**

This course unit cannot be taken via an exam contract

#### **Teaching methods**

Group work, Excursion, Lecture, Independent work

#### **Extra information on the teaching methods**

- Hoorcollege: 20u
- Groepswerk: 10u
- Practicum: 20u
- Project: 10u

#### **Study material**

None

#### **References**

Chemical Process Technology, Jacob A. Moulijn, Michiel Makkee, Annelies van Diepen, ISBN: 978-0-471-63062-3, 2001 ULLMANN'S Encyclopedia of Industrial Chemistry: <http://www.wiley-vch.de/vch/software/ullmann>

#### **Course content-related study coaching**

Begeleiding door assistent

#### **Assessment moments**

end-of-term and continuous assessment

#### **Examination methods in case of periodic assessment during the first examination period**

Oral assessment

#### **Examination methods in case of periodic assessment during the second examination period**

Oral assessment

#### **Examination methods in case of permanent assessment**

Assignment

#### **Possibilities of retake in case of permanent assessment**

examination during the second examination period is not possible

**Extra information on the examination methods**

During examination period: oral closed-book exam, written preparation

During semester: graded project reports. Second chance: Not possible

**Calculation of the examination mark**

Evaluation throughout semester as well as during examination period. Special

conditions: none; project reports: 6/20; exam: 14/20
