Aangeboden in onderstaande opleidingen in 2023-2024

	stptn	aanbodsessie
Master of Science in de bio-ingenieurswetenschappen: chemie en bioprocestechnologie	5	A
Master of Science in de bio-ingenieurswetenschappen: levensmiddelenwetenschappen en voeding	5	A
Master of Science in de biowetenschappen: voedingsindustrie	5	A
Uitwisselingsprogramma bio-ingenieurswetenschappen: chemie en bioprocestechnologie (niveau master-na-bachelor)	5	A
Uitwisselingsprogramma bio-ingenieurswetenschappen: Food Science and Nutrition (niveau master-na-bachelor)	5	A

Onderwijsstalen

Engels

Trefwoorden

Packaging engineering, sealing technology, filling systems, active and intelligent packaging, biobased and compostable plastics, circular packaging

Situering

This course gives an overview of important engineering techniques to enhance functionality of packaging materials focusing on barrier technology, temperature resistance, sealing technology and active and intelligent packaging systems. Both conventional packaging materials as well as re-usable, recyclable or renewable packaging materials (e.g. bioplastics) are considered, also elaborating on different sustainable and safety aspects within a national and international context. Besides, filling systems for both solid and liquid products are elaborated.

Inhoud

1. Introduction

- 1.1. Role of packaging in today's society
- 1.2. Overview packaging materials
 - 1.2.1. Metal packaging
 - 1.2.2. Glass packaging
 - 1.2.3. Paper - paperboard
 - 1.2.4. Plastics
- 1.3. The packaging chain: many stakeholders

2. Packaging engineering

- 2.1. Introduction
- 2.2. Production techniques rigid and flexible packaging
- 2.3. Barrier technology
 - 2.3.1. Factors affecting barrier capacities
 - 2.3.2. Case: PredOxyPack

- 2.3.3. *High barrier technology*
- 2.3.4. *Low barrier technology*
- 2.4. Temperature resistance technology
 - 2.4.1. *Crystallisation technology*
 - 2.4.2. *Susceptor technology*
- 2.5. Nucleating and clarifying agents
- 2.6. Anti-fog coatings

3. Adhesive and printing processes

- 3.1. Adhesive processes
- 3.2. Printing processes
- 3.3. Shrink sleeves
- 3.4. In Mould Labelling

4. Sealing technology

- 4.1. Introduction
- 4.2. Seal behaviour of plastics
- 4.3. Sealing systems
- 4.4. Seal behaviour
- 4.5. Closures for plastic bottles and tubs
- 4.6. Tamper-evident and safety closures

5. Filling systems

- 5.1. Filling systems for solid products
- 5.2. Filling systems for liquid products
- 5.3. Leak detection technology

6. Active and intelligent packaging

- 6.1. Active packaging
 - 6.1.1. *Oxygen scavengers*
 - 6.1.2. *Carbon dioxide scavengers/emitters*
 - 6.1.3. *Water absorbers*
 - 6.1.4. *Ethylene absorbers*
 - 6.1.5. *Antimicrobial packaging*
 - 6.1.6. *Self-heating cans and containers*
- 6.2. Intelligent packaging
 - 6.2.1. *Time-temperature indicators (TTI's)*
 - 6.2.2. *Gas indicators*
 - 6.2.3. *Thermochromic inks*
 - 6.2.4. *Quality indicators*
 - 6.2.5. *Radio Frequency Identification (RFID)*
 - 6.2.6. *Provide protection against theft, counterfeiting and tampering*
 - 6.2.7. *Provide improved sorting instructions in the recycling sector*

7. Sustainability and packaging

- 7.1. Circular economy & packaging
- 7.2. Biobased and compostable plastics
 - 7.2.1. *Classes*
 - 7.2.2. *Materials*
 - 7.2.3. *Resources and availability*
 - 7.2.4. *Functionality*
 - 7.2.5. *Waste management options*
 - 7.2.6. *Commercial applications as packaging materials*
 - 7.2.7. *Challenges*

8. Quality control of packaging materials

- 8.1 Performance
- 8.2 Safety of packaging materials
 - 8.2.1. *Factors influencing migration*
 - 8.2.2. *Legislation*

9. Packaging design and logistics

10. References

Begincompetenties

Basic knowledge organic chemistry is recommended.

Eindcompetenties

- 1 Gain insight in processes which are used to improve the barrier properties, thermal properties and seal properties of packaging materials for food and non-food products
- 2 Analyse and evaluate the impact of the composition of packaging materials as well as the

- type of filling systems on the quality and shelf-life of packaged food and non-food products
- 3 Perform calculations to determine the appropriate packaging configuration towards gas barrier
 - 4 Critically evaluate the safety of packaging materials towards food contact by means of legislation and simulations
 - 5 Collect information on the structure, processing and usage of packaging materials both for food and non-food products
 - 6 Gain insight on the one hand in the multidisciplinary framework of food and non-food packaging and on the other hand in the complexity and interactions within the packaging chain
 - 7 Critically evaluate the functionality, convenience and sustainability of the packaging of a selected product and communicate this clearly both in a written and oral format
 - 8 Gain insight in the various factors determining the sustainability of packaging materials both from a resource level, usage level and waste processing level
 - 9 Situate the impact of both food and non-food packaging in a broader social framework, taking into account the needs/requirements of various stakeholders within the packaging chain

Creditcontractvoorwaarde

Toelating tot dit opleidingsonderdeel via creditcontract is mogelijk mits gunstige beoordeling van de competenties

Examencontractvoorwaarde

Dit opleidingsonderdeel kan niet via examencontract gevolgd worden

Didactische werkvormen

Groepswerk, Werkcollege, Excursie, Hoorcollege, Zelfstandig werk

Toelichtingen bij de didactische werkvormen

Lectures include guest lectures from companies to share their developments or insights on specific packaging topics. Seminars focus on calculating oxygen ingress in packaging and on evaluating migration profiles of food packaging. The group work elaborates on a selected packaged product, in which the students (two students per group) need to describe the packaging configuration in relation to the packaged product and propose modifications to increase functionality, convenience or sustainability of the package. This group work includes two feedback moments to discuss the progress of the work. Presentation of the final work is performed through a written assignment and oral presentation. Excursion includes company visits. Independent work is in the framework of the group work; the students should gather relevant information enabling them to identify the packaging configuration of the selected packaged product.

Leermateriaal

A syllabus is available in English and is distributed by the VLK. More information through this [link](#).

Vakinhoudelijke studiebegeleiding

Student counseling is foreseen 1) during or after theoretical sessions, 2) during or after practical sessions and 3) by means of e-mail or personal meeting.

Evaluatiemomenten

periodegebonden en niet-periodegebonden evaluatie

Evaluatievormen bij periodegebonden evaluatie in de eerste examenperiode

Mondelinge evaluatie

Evaluatievormen bij periodegebonden evaluatie in de tweede examenperiode

Mondelinge evaluatie

Evaluatievormen bij niet-periodegebonden evaluatie

Werkstuk

Tweede examenkans in geval van niet-periodegebonden evaluatie

Examen in de tweede examenperiode is mogelijk

Toelichtingen bij de evaluatievormen

The oral examination consists of a written preparation (40 minutes) followed by an oral examination (20 minutes). There are two other evaluation methods, besides the oral examination: evaluation of the project (group work) and evaluation of the report of the seminars. The evaluation of the project is based on the written report and on a presentation followed by a Q&A-session.

Eindscoreberekening

Periodic evaluation: oral examination with written preparation: 60%

Non-periodic evaluation: 40%

- Project: 40%
- Presentation and defense of the project: 40%
- Report on plenary exercises: 20%

Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner. In case of achieving a mathematical number of 10 or more out of 20 for this course unit, this will be converted into 7 out of 20.
