

MASTER OF SCIENCE IN INDUSTRIAL ENGINEERING AND OPERATIONS RESEARCH (SUSTAINABLE MOBILITY ANALYTICS)

120 ECTS CREDITS - LANGUAGE: ENGLISH

Note: students need to submit **two parallel applications**, both at UGent and at the EIT Urban Mobility Master School. Only students accepted for both applications, will receive a letter of admission for this programme.

WHAT

This Master programme combines the core disciplines of Industrial Engineering and Operational Research. Industrial Engineering is a branch of engineering that deals with analysing, designing and optimising complex operational systems. The set of the mathematical tools these engineers rely on for designing operational systems is known under the term Operations Research.

Sustainable Mobility Analytics aims to improve urban mobility in our cities and around the world. This requires not only the improvement of transport infrastructure but also a system approach towards a better planning, execution and operation. Today, new data coming from smartphones or intelligent transport systems are becoming available. As we continue to urbanize and gather more data about our mobility patterns and urban systems, the challenge is not simply the amount of data, but how we manage it, critically understand its quality, and utilize it for decision support on cities' most pressing challenges. There is an expanding need to forge a new generation of engineers, capable of analyzing complex flows and relations in an urban environment and extracting meaningful insights. Such work is critical to support cities' strategic decisions and push towards a more sustainable future, centered on efficient resource use, a clean environment, equitable citizen engagement, and a healthy, low-carbon society. The Sustainable Mobility Analytics programme is designed in an interdisciplinary fashion to analyze, start and manage new and emerging transport and mobility technologies and services for citizens and logistics.

STRUCTURE

The track is a double degree program. You will spend one year each at two different universities - the "entry" university (first master year) and the "exit" university (second master year). All choices are located at a leading university in Europe in the field of urban mobility: UGent, TU/e Eindhoven, UPC Barcelona, POLIMI Milano and University of Tartu. Graduating students will be awarded two master's degrees, one from each university where they carried out their studies. Moreover, the programme is designed so that students attain a certificate awarded by the European Institute of Innovation and Technology. The programme consists of a general module, main subject

modules, elective courses, and a master dissertation. The track has integrated technical content and business content (on Innovation & Entrepreneurship). The general module contains 30 credits of courses that cover the core competences of Industrial Engineering and Operations Research. The main subject modules cover 30 credits of specialist courses in the domain of Sustainable Mobility Analytics. Through 30 credits of elective courses, students can further deepen and/or broaden their knowledge and skills in technical and non-technical subjects. In the Master Dissertation, students perform academic research in close collaboration with a company or organisation in transport or mobility.

Between the first and second year, students will participate in a Summer School applying new skills to two different cities within Europe, with all students active in the EIT Urban Mobility Master School.

LABOUR MARKET

You will have a wide range of career opportunities, within the public and private sector, as well as the business know-how to start your own business or conduct rigorous research.

MASTER OF SCIENCE IN INDUSTRIAL ENGINEERING AND OPERATIONS RESEARCH (SUSTAINABLE MOBILITY ANALYTICS)

120 ECTS CREDITS - LANGUAGE: ENGLISH

TOELATINGSVOORWAARDEN VOOR HOUDERS VAN EEN VLAAMS DIPLOMA

1 Na onderzoek van de bekwaamheid van de student om de opleiding te volgen:

a opleidingen nieuwe structuur:

- Een diploma van een opleiding 'Bachelor of Science in de ingenieurwetenschappen' (met uitzondering van 'architectuur')
- Een diploma van een opleiding 'Master of Science in de ingenieurwetenschappen' leidend tot de titel van 'burgerlijk ingenieur' (met uitzondering van architectuur)
- Een diploma van een opleiding 'Master of Science in Engineering' leidend tot de titel van 'burgerlijk ingenieur' (met uitzondering van Architecture)

b opleidingen oude structuur:

- Een diploma van 'Burgerlijk Ingenieur' (met uitzondering van 'Burgerlijk Ingenieur-Architect')

Language requirements Dutch: no language requirements
English: CEFR level B2

Enrolling institution

The MSc in Industrial Engineering and Operations Research, main subject Sustainable Mobility Analytics is accessible only to students taking a double degree between this programme and another master's programme of a partner university within the context of the MSc in Smart Mobility Data Science and Analysis double degree programme of the EIT Urban Mobility. Students applying for this double degree programme (students holding a degree of the Flemish Community as well as international degree students) must submit, in parallel, two applications for admission:

1. application for admission to the master's programme Master of Science in Industrial Engineering and Operations Research, Main Subject: Sustainable Mobility Analytics at Ghent University Online Application Platform.
2. application for admission to the MSc in Smart Mobility Data Science and Analytics double degree programme (and possibly also for an EIT scholarship) on the EIT Urban Mobility Master School Office admission portal.

Only students accepted for both applications, will receive a letter of admission for this track. Please note that, apart from the double degree in itself, different conditions apply as to participation cost, language requirements, study progress monitoring...).

Application Deadline (for International degree students)

The application period is from **November 15th** until **April 14th**. **Remark:** the applicant is responsible for the visa application. Students who need a visa should take into account the time required for the visa application.

ADMISSION REQUIREMENTS FOR INTERNATIONAL DEGREE STUDENTS

Information on admission requirements and the administrative procedure for admission on the basis of a diploma obtained abroad, can be found on the following page: www.ugent.be/admission

Additional information:

Students who wish to enrol for the Master of Science in Industrial Engineering and Operations Research can enter the programme without any prerequisites if they hold the following diploma: an

academic diploma of Bachelor (or Master) of Science in Engineering (university level, minimum three years), and/or a Master of Science in BioScience Engineering or an equivalent to this.

Admission can only be granted after an individual application procedure. The Study Programme Committee will make the final decision whether to accept the application or not. The Study Programme Committee can decide that students need to follow a preparatory course or an individual Master's programme, for instance for students with another diploma of Bachelor or Master.

Learning path counsellor

The study progress of all EIT Urban Mobility students is monitored by the EIT Master School Office, in collaboration with the Partner Universities. The study progress regulations for this programme implies that students who do not pass at least 80% of the credits in the first year of the programme (entry year) may not continue the programme in the following year.
