Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course
Ecology of Coastal Seas (C002491)

Valid as from the academic year 2020-2021

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size
Crts 3.0
Study time 90 h
Contact hrs 20.0 h

Course offerings and teaching methods in academic year 2021-2022
A (semester 2)  English  Gent  lecture  20.0 h

Lecturers in academic year 2021-2022
De Troch, Marleen  WE11  lecturer-in-charge

Offered in the following programmes in 2021-2022
Master of Science in Marine and Lacustrine Science and Management 3 A

Teaching languages
English

Keywords
Coastal Seas, Ecology, Functional Biodiversity, continental shelf beds, sandy beaches, seagrass beds, rocky shores, coastal zone management.

Position of the course
To take an ecosystem approach to ‘marine’ coastal ecology. It will offer integrated approaches related to shallow coastal seas with a focus on case studies from European waters (North Sea, Baltic Sea, Mediterranean, Black Sea and Caspian Sea), including intertidal areas.

Contents
This course will describe and explain processes related to rocky shores and soft substrate environments (sandy beaches, mudflats, subtidal shallow sandbanks, reef systems). Emphasis will be given on whole-ecosystem approach going from physical structure and functioning, physical-biological interactions, nutrient fluxes, food web structure, community dynamics, biodiversity threads, nature conservation and management.

Initial competences
Basics in marine biology, geology, chemistry and oceanography.

Final competences
This discipline contributes to a multidisciplinary training of a marine and lacustrine scientist.

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
This course unit cannot be taken via an exam contract

Teaching methods
Lecture

Extra information on the teaching methods
A series of case studies are documented, presented by post-doc experts in marine biology.
remark: due to COVID19 on campus lectures can be replaced by online alternatives

Learning materials and price
Several handbooks and recent review articles.

Course content-related study coaching

Evaluation methods

end-of-term evaluation

Examination methods in case of periodic evaluation during the first examination period

Written examination with open questions, report

Examination methods in case of periodic evaluation during the second examination period

Written examination with open questions, report

Examination methods in case of permanent evaluation

Possibilities of retake in case of permanent evaluation

not applicable

Extra information on the examination methods

Calculation of the examination mark A seminar is presented by the students; interaction with the audience is in this case very important as well. Both aspects, seminar presentation, report and discussion are evaluated in equal parts.

Calculation of the examination mark
