Keywords

Economic History

Position of the course

This course unit is a core subject within the module Modern and Contemporary History in the third year of the Bachelor's program in History. Its aim is to familiarize students with the major economic transformations since the onset of the Industrial Revolution at the end of the eighteenth century. The various interpretations of the nature of these developments, their causes, and their global consequences are explored in this course unit.

Contents

In this course unit, we examine the key historical and economic debates concerning the development of global capitalism and economic growth from around 1750 to the present.

Through empirical case studies, historical interpretative frameworks, social science concepts, and economic models, we highlight the major developments and debates in and about the economic history of the past 250 years from multiple perspectives.

Topics covered include, among others: economic growth and capitalism, industrialization and mechanization, science and technology, slavery and (un)free labor, government regulation and free market trade, risk and financial crisis, consumption and everyday economics, neoliberalism and deregulation, and the relationship between economy and ecology.

Initial competences

No specific knowledge required.

Final competences

- 1 Possess foundational knowledge of the key terms, concepts, and models used in the study of modern and contemporary economic history.
- 2 Understand the economic developments since the First Industrial Revolution across different parts of the world.
- 3 Be able to critically reflect on the major debates in modern and contemporary economic history.
- 4 Have insight into the various models of economic development and be able to

assess them critically.

5 Be capable of interpreting contemporary developments from a historical-comparative perspective.
