Keywords

Translation studies; interpreting studies; equivalence; skopos; translation policy;
history of translation and translation studies; research and research methods in
contemporary translation studies; inferential statistics

Position of the course

The aims of this course are:

- to introduce the broad and specific nature translation and interpreting, and related research activities.
- show how important translation and interpreting has been in western history in general and for languages in particular.
- show the most important research methods in translation and interpreting studies.
- introduce the most important heuristics.

Contents

This course provides an overview of the most important insights in various domains of translation (research) and interpreting (research). The first part addresses the different translation and interpreting circumstances (legal translation, literary translation, conference interpreting, subtitling, post-editing etc.). It also introduces crucial concepts as equivalence, skopos, context, and it discusses the influence of translation policy on translation activities. The first part closes with a brief overview of the history of translation and translation research.

The second part provides a more in-depth overview of several translation and interpreting domains, and related research activities: corpus-based translation and interpreting studies (e.g., translation norms), manipulation in translation, the function of style, ideology and interculturality in literary translation, audiovisual translation, machine translation and post-editing.

The third part consists of a brief overview of crucial concepts and techniques in inferential statistics, which is illustrated on the basis of recent case studies in translation and interpreting research.

Initial competences

General interest in language phenomena

Average general knowledge that can be expected from someone who has completed secondary education; no specific starting competences required.
