A

**Teaching languages**

English

**Keywords**

Estimation theory, hypothesis tests

**Position of the course**

The students learn the important concepts and methods in estimation theory and acquire a theoretical foundation in statistics. This training enables the students to get a good insight in each of the statistical methods used in the different domains and application fields of statistics. Students learn to develop inference methods to solve specific statistic problems using this general theory.

**Contents**

- *Properties of estimators: bias, variance, mean squared error, asymptotic bias, consistency*
- *Maximum Likelihood Estimators, Score vectors, Fisher information, the Cramer-Rao inequality*
- *Large sample inference: convergence in distribution and probability, the Weak Law of Large Numbers,*
- *the Central Limit Theorem, Consistency of estimators, Slutsky's Lemma and the Delta Method*
- *Fundamentals of confidence intervals and hypothesis testing*
- *Likelihood-based hypothesis testing: the Wald, Score and Likelihood ratio tests*
- *Bayesian methods: Bayesian versus frequentist statistics, Bayes' Rule, prior and posterior, Bayesian*
- *estimation and credible intervals, conjugate priors*
- *M-estimators: unbiased estimating equation, sandwich estimator of the variance*
- *Inference under the bootstrap*
- *Advanced topics in inference: super-efficiency, decision theory, nonparametric estimation, model-based and design-based inference.*

**Initial competences**

Having successfully followed the courses 'Statistics I', 'Statistics II' and 'Statistics III' or having acquired the intended competences in another way.

## Final competences

- 1 Have knowledge of the basics of statistical inference theory.
- 2 Apply in a specific context the most important estimation methods and inference techniques of statistics.
- 3 Derive the relevant properties of estimators and test procedures.
- 4 Judge the applicability and limitations of statistical methods.
- 5 Use methods to solve practical statistical problems.
- 6 Correctly interpret the properties of the methods in the specific context of the application.

## Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

## Conditions for exam contract

This course unit cannot be taken via an exam contract

## Teaching methods

Seminar, Lecture, Peer teaching

## Study material

Type: Handbook

Name: Foundations of Agnostic Statistics (1st Edition), Cambridge.

Indicative price: Free or paid by faculty

Optional: yes

Language : English

Author : Aronow, P. M., Miller B. T.

ISBN : 978-1-10717-891-5

Number of Pages : 298

Alternative : NA

Oldest Usable Edition : 1st edition

Online Available : Yes

Available in the Library : Yes

Available through Student Association : No

Usability and Lifetime within the Course Unit : regularly

Usability and Lifetime within the Study Programme : regularly

Usability and Lifetime after the Study Programme : occasionally

Additional information: Can be freely downloaded from <https://www.cambridge.org/core/books/foundations-of-agnostic-statistics/684756357E7E9B3DFF0A8157FB2DCECA#:~:text=This%20book%20develops%20the%20fundamentals,be%20>

Type: Slides

Name: Statistical Inference

Indicative price: Free or paid by faculty

Optional: no

Language : English

## Course content-related study coaching

Interactive support via Ufora (e-mail) and personally after electronic appointment.

## Assessment moments

end-of-term and continuous assessment

## Examination methods in case of periodic assessment during the first examination period

Written assessment

## Examination methods in case of periodic assessment during the second examination period

Written assessment

## Examination methods in case of permanent assessment

Oral assessment

**Possibilities of retake in case of permanent assessment**

examination during the second examination period is not possible

**Calculation of the examination mark**

Periodical evaluation (75%) + non-periodical evaluation (25%).
