**Teaching languages**

English

**Keywords**

Bioethics, Applied Ethics

**Position of the course**

The aim of this course is to introduce fundamental ethical approaches and common arguments in bioethical debate, and to encourage students to identify and critically analyse ethical questions related to the life sciences.

**Contents**

An overview will be given of common approaches in ethical argumentation and of the most important theories in normative ethics: consequentialism / utilitarianism, deontology and virtue ethics.

Starting from concrete ethical issues related to the students' research interests, the students will learn to identify and analyse controversial ethical questions arising from developments in the life sciences. During the lectures students will be encouraged to think critically about ethical issues and to develop well argued positions.

Part of the course will involve discussion on recent discoveries/technologies/developments that raise ethical concern. These discussions provide an opportunity for the students to apply the skills that are acquired during the lectures.

Examples of topics included in the lectures and discussions:

- Research animals
- Stem cell research

- Neuromodulation and enhancement
- Genetically modified organisms and/or climate
- BioArt

### Initial competences

- Good knowledge of English is required
- Analyse abstract and concrete problems
- Reflect critically
- Communicate a personal stance

### Final competences

- 1 Have an insight in the crucial differences between the most important argumentation frameworks in normative ethics.
- 2 Discuss ethical issues from different perspectives and advance a well-argued position on these issues.
- 3 Develop and communicate well-argued ethical analyses regarding the impact of innovations in biology, biochemistry and biotechnology on society and the global world.
- 4 Develop and communicate a well-argued ethical view regarding the value of the life sciences and scientific and technological developments for society.
- 5 Act in accordance with ethical research principles and internationally accepted ethical guidelines while engaging in research and associated professional activities.

### Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

### Conditions for exam contract

This course unit cannot be taken via an exam contract

### Teaching methods

Seminar, Lecture, Independent work

### Extra information on the teaching methods

- texts in preparation of class (individual work)
- lectures (on campus or online)
- guided discussion in group (seminar)

### Study material

Type: Reader

Name: Bioethics: A Coursebook

Indicative price: € 5

Optional: no

Language : English

Number of Pages : 166

Available on Ufora : Yes

Online Available : Yes

Additional information: The cost is linked to whether or not you print the material

### Course content-related study coaching

By lecturer, after appointment or via email.

### Assessment moments

end-of-term assessment

### Examination methods in case of periodic assessment during the first examination period

Written assessment

### Examination methods in case of periodic assessment during the second examination period

Written assessment

### Examination methods in case of permanent assessment

### Possibilities of retake in case of permanent assessment

not applicable

**Extra information on the examination methods**

The assessment tests to what extent the student has mastered the final competencies. The student can achieve a good final score if he answers the questions pertinently, correctly and completely and demonstrates insight into the subject matter. He must also be able to correctly and insightfully apply theoretical concepts to practical cases. The student is also expected to present his answer in a well-structured and clear manner.

**Calculation of the examination mark**

written exam: 100%
