### Teaching languages

Dutch

### Keywords

Web, Web technology, Web applications, Web servers, HTTP, URL, Web APIs, REST, Linked Data, decentralization, standardization, JavaScript.

### Position of the course

Through this course, students learn the basic principles and architecture of the Web, and they study the impact of design decisions on a low level on Web applications at a large scale. In addition to these transferrable skills, they gain experience with current Web technologies and infrastructure. We embed these technologies in the broader socio-economic reality, and study scientific literature that enables progress in this domain.

### Contents

1. Socio-economic and historical context of the Web
2. Web architecture, protocols, and standards
3. Design and implementation of Web APIs
4. Data on the Web
5. Decentralization
6. Concrete Web applications and case studies

### Initial competences

- Creating basic webpages using HTML and CSS.
- Programming in JavaScript (including classes and asynchronous code).
- Understanding how the TCP/IP and DNS protocols work.

### Final competences

1. Understanding the architecture of the Web.
2. Understanding the mechanisms of HTTP.
3. Looking up Web standards and applying them.
4. Building dynamic Web applications.
5. Deploying Web applications to a server.
6. Arguing the consequences and applicability of the REST architectural style.
7. Implementing Web APIs.
8. Consuming Web APIs.
10. Assessing the impact of (de-)centralization.
11. Designing and building decentral applications.
12. Positioning the Web's societal role and technological contribution.
13. Critically interpreting communication on Web technology.

(Approved)
Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment.

Conditions for exam contract
This course unit cannot be taken via an exam contract.

Teaching methods
Group work, Seminar, Lecture, Independent work

Study material
Type: Slides
  Name: Slides’
  Indicative price: Free or paid by faculty
  Optional: no
  Additional information: interactive Web slides with discussion opportunities additional slides through the learning platform

Type: Handouts
  Name: Selection of scholarly articles’
  Indicative price: Free or paid by faculty
  Optional: no

References

Course content-related study coaching
  • contact with the lecturers (through email and in person after appointment)
  • supervised labs

Assessment moments
  end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period
  Oral assessment

Examination methods in case of periodic assessment during the second examination period
  Oral assessment

Examination methods in case of permanent assessment
  Peer and/or self assessment, Assignment

Possibilities of retake in case of permanent assessment
  examination during the second examination period is possible in modified form

Extra information on the examination methods
  • Non-periodical evaluation
    • labs in groups
    • support by generative AI systems permitted
  • Periodical evaluation
    • oral examination
    • written preparation
    • open book
    • open Web
    • support by generative AI systems permitted

Calculation of the examination mark
  The final grade is the average grade of the two parts (exam and labs).
  In case the grade for any part is less than 10/20, the final grade is capped at 9/20.
  In case the grade for any part is 7/20 or less, the final grade is capped at 7/20.
  For students who have not passed the permanent evaluation, an alternative assignment is provided in the second examination period. Depending on the situation, it may be in a group and/or may be an extension of the original assignment.

Facilities for Working Students
  Possibility to perform an individualized version of the practical sessions, given a timely notification at the start of the semester.
