**Teaching languages**

Dutch

**Keywords**

Quantum chemistry, quantum mechanics, theoretical chemistry

**Position of the course**

This course continues the theoretical approach to chemistry and is part of the physical chemistry training. It highlights the role of quantum mechanics in chemistry and how it can be used to solve atomic and molecular problems using approximation methods. The focus lies on fundamental insight in the theories and methods with emphasis on Single Slater determinant methods that are studied in detail.

**Contents**

- Approximation methods for non-exactly solvable problems
- Many-electron atoms: the central field approximation
- Coupling of angular momenta in atoms
- Many-electron atoms: advanced approximations
- Matrix representations of operators and Clebsch-Gordan coefficients
- Molecules: the Born-Oppenheimer approximation
- Diatomic molecules: quantum numbers and wave functions
- Single Slater determinant methods: Hartree-Fock theory
- Many Slater determinant methods: Configuration Interaction

**Initial competences**

This course builds further on certain final competences of the courses:

- General chemistry
- Chemical structures
- Mathematics: basic concepts
- Mathematics: advanced techniques
- Physics: mechanics
- Physics: waves, optics and thermodynamics

This course requires the knowledge of the matter taught in Chemical Structures (C003964) and mathematics courses (C004113 and C004114). It is essential that the student has taken these courses prior to taking the Electronic Structure course.

## Final competences

- 1 The student has gained a much deeper insight and knowledge of the fundamental aspects of modern chemistry.
- 2 The student understands the limitations and range of applicability for electron structure methods.
- 3 The student is able to design electronic structural models for chemical systems and interpret the subsequent solutions.

## Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

## Conditions for exam contract

This course unit cannot be taken via an exam contract

## Teaching methods

Seminar, Lecture

## Extra information on the teaching methods

## Study material

Type: Syllabus

Name: Bachelor's quantum theory

Indicative price: € 20

Optional: no

Language : English

Number of Pages : 200

Available on Ufora : Yes

Online Available : Yes

Available in the Library : No

Available through Student Association : No

## Course content-related study coaching

Interactive support through Ufora 'Discussions'. Individual guidance by teachers / assistants: by electronic appointment via MS Teams.

## Assessment moments

end-of-term assessment

## Examination methods in case of periodic assessment during the first examination period

Oral assessment, Written assessment with open-ended questions

## Examination methods in case of periodic assessment during the second examination period

Oral assessment, Written assessment with open-ended questions

## Examination methods in case of permanent assessment

## Possibilities of retake in case of permanent assessment

not applicable

## Extra information on the examination methods

The evaluation evaluates the theoretical part (oral examination with a written preparation) as well as the exercises (written examination). The evaluation evaluates (1) the insight in electronic structural methods (2) the capacity to apply them to chemical problems and (3) the interpretation of the results obtained for applications on real chemical problems.

## Calculation of the examination mark

The exam comprises two parts. The theory part that counts for 10 out of 20 points and the exercise part that also counts for 10 of the 20 points. The theory part consists of one question that can be prepared on paper and is examined in an oral

(Approved)

defense and one question that is answered in a purely written fashion. Students must participate in both parts of the exam or else cannot pass. Failure to participate in one of both parts or failure to reach a mark of at least 4/10 results in a no-pass end score irrespective of the grand score on 20.
