Position of the course

This course unit belongs to the learning pathway "Mathematics" in the Bachelor program Physics and Astronomy.

The aim of this course is to let the student work with complex numbers and all their applications

Contents

1. Complex functions (2h)
 - 1 complex algebra: elementary operations
 - 2 functions of complex variable
 - 3 Complex line and contour integrals (definition)
 - 4 Green's theorem
2. Holomorphic Functions (5h)
 - Cauchy-Riemann conditions
 - examples, complex derivative, properties, geometric interpretation, conformal mapping
 - rows and series of complex functions, convergence theorems
 - Cauchy's theorem
 - Laurent's theorem, Laurent series, analytic continuation
 - singular points and the residual theorem
 - elementary functions and their inverse: polynomials and rational functions, exponential
 - and logarithmic function, trigonometric and hyperbolic functions and their inverses
3. Contour integrals and applications (3h)
 - Limits
 - Trigonometric integrals
 - Improper integrals
 - Summation of series
 - Laplace - transformation and inversion
 - Asymptotic developments: stationary phase method and saddle point method
4. Harmonic functions (2h)
 - Dirichlet problem for the Laplace operator in bounded areas
 - Dirichlet and Neumann problem for the Laplace operator in unbounded areas

- Applications
 - Spherical Harmonics revisited
- The teacher reserves the right to make changes to this content

Initial competences

Final competences

- 1 The aim of this course is to let the student work with complex numbers and all their applications.
- 2 To be able to work out contour integrals.
- 3 To be able to work out exercises on harmonic functions.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Seminar, Lecture, Independent work

Extra information on the teaching methods

The students will have to solve problems during the classes

Study material

Type: Syllabus

Name: Complex analysis

Indicative price: Free or paid by faculty

Optional: no

Language : English

Number of Pages : 192

Available on Ufora : Yes

Online Available : No

Available in the Library : No

Available through Student Association : Yes

Additional information: You will get the course via Ufora and you can chose if you want to print the course

Course content-related study coaching

Guided exercises

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written assessment with open-ended questions

Examination methods in case of periodic assessment during the second examination period

Written assessment with open-ended questions

Examination methods in case of permanent assessment

Written assessment

Possibilities of retake in case of permanent assessment

not applicable

Extra information on the examination methods

There will be 2 exercise sessions that are compulsory. During these session students will solve exercises, each for 1 of the 20 exam points. Feedback will be provided.

Exam will consist exclusively of exercises that will gauge the student's knowledge of complex analysis for 18 of the 20 points

Calculation of the examination mark

The final score is calculated by adding the two points earned throughout the year (2 mandatory practice sessions, each worth 1 point) to the final exam score (worth

18 points). This results in a total of 20 points.

Facilities for Working Students

Working students are allowed to process exercises and teaching material themselves and only participate in the final exam
