

Elementary Particle Physics (C004224)

Course size *(nominal values; actual values may depend on programme)*

Credits 4.0 **Study time 120 h**

Course offerings and teaching methods in academic year 2024-2025

A (semester 2)	English	Gent	seminar lecture
----------------	---------	------	--------------------

Lecturers in academic year 2024-2025

Stachurska, Juliana	WE05	lecturer-in-charge
Dobur, Didar	WE05	co-lecturer

Offered in the following programmes in 2024-2025

	crdts	offering
Bachelor of Science in Physics and Astronomy	4	A
Exchange programme Faculty of Sciences (bachelor's level)	4	A
Preparatory Course Master of Science in Physics and Astronomy	4	A
Preparatory Course Master of Science in Physics and Astronomy	4	A

Teaching languages

English

Keywords

Particle physics

Position of the course

This course unit belongs to the learning pathway "Structure of Matter" in the Bachelor program Physics and Astronomy.
An introduction in elementary particle physics is given.

Contents

- Preliminary notions
 - Reminders of relativistic kinematics
 - Collisions and decays of particles
 - Elementary particles and fundamental interactions
- Particle detectors and accelerators
 - Passage of radiation through matter
 - The sources of high-energy particles and accelerators
 - Particle detectors
- Nucleons, Leptons and mesons
 - The muon and the pion
 - Strange mesons and hyperons
 - The Dirac equation, positron and anti-proton
- Symmetries and conservation laws
- Hadrons
 - Resonances
 - Pseudovector and scalar mesons
 - The quark model
 - Mesons, Baryons, Charmed hadrons and the 3rd family
- Quantum electrodynamics (QED)
- Quantum Chromodynamics
- Weak Interaction
 - Helicity and chirality
 - Parity violation
 - Quark mixing

- CP violation and meson oscillation
- Brief description of Neutrino oscillations

Initial competences

Basics of quantum mechanics and special relativity

Final competences

- 1 Form the basis to be able to follow advanced courses in high energy particle physics in particular Subatomic physics II.
- 2 Have a consistent picture of the deepest structure of matter, in particular elementary particles in nature and the different interactions among them.
- 3 Symmetries and conservation of quantum numbers, get familiar with parity violation, CP, lepton, baryon numbers.
- 4 Ability to make connections between experimental results and theoretical predictions.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Seminar, Lecture

Study material

Type: Handbook

Name: Particles and Nuclei: An Introduction to the Physical Concepts

Indicative price: Free or paid by faculty

Optional: no

Author : Povh, Rith, Scholz, Zetsche and Rodejohann

ISBN : 978-3-54079-367-0

Oldest Usable Edition : Seventh Edition

Online Available : Yes

Additional information: Available online:

<https://www.phenix.bnl.gov/WWW/publish/elke/EIC/BOOKs/ParticlesAndNuclei.pdf>

References

Introduction to Elementary Particle Physics , Alessandro Bettini, Cambridge 2nd Edition

David Griffiths "Introduction to Elementary Particles" (Wiley VCH, 2nd edition 2008)

Course content-related study coaching

Students have individual access to the lecturer after the lectures. The lecturer is always reachable through e-mail.

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Oral assessment, Written assessment with open-ended questions

Examination methods in case of periodic assessment during the second examination period

Oral assessment, Written assessment with open-ended questions

Examination methods in case of permanent assessment

Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is possible in modified form

Extra information on the examination methods

Written examination with open questions where the book can be used only for exercise questions, oral examination, assignment.

During the semester students will be assigned exercise homeworks, one or two times per semester.

Calculation of the examination mark

- Theory: 40%

- Exercises: 40%
- Homework assignment: 20%

Small deviations from the exact division are possible, depending on the difficulty of the questions in each category.
