

## Marine Resources Genomics (C004232)

**Course size** *(nominal values; actual values may depend on programme)*

**Credits 4.0**                      **Study time 100 h**                      **Contact hrs**                      36.0h

**Course offerings in academic year 2022-2023**

A (semester 2)                      English                      Gent

**Lecturers in academic year 2022-2023**

Estonba, Andone	LEIOA01	lecturer-in-charge
Alberdi, Antton	LEIOA01	co-lecturer
Montes, Iratxe	LEIOA01	co-lecturer
Zarraonaindia, Iratxe	LEIOA01	co-lecturer

**Offered in the following programmes in 2022-2023**

	<b>crdts</b>	<b>offering</b>
<a href="#">International Master of Science in Marine Biological Resources</a>	4	A

**Teaching languages**

English

**Keywords**

molluscs, crustaceans, fish, metabarcoding, metagenomics, population genetics

**Position of the course**

Molecular population genetics of marine animal and its applications in fisheries, marine farming, conservation management and ecosystem health protection. The course aims to initiate students into genomic research in the marine world by exploring current research cases, understanding of cutting-edge lab technologies, building bioinformatics/computational skills, and shaping knowledge base. At the end of the Unit, you should be able to apply population genomic approaches to survey patterns of variation within and among marine fish and shellfish populations and to apply metagenomic/metabarcoding approaches to study of complete communities directly in their natural environments.

**Contents**

- 1 Basics on Genomics.
- 2 Population genomics in non-model organisms.
- 3 Metabarcoding /Metagenomics.

**Initial competences**

Basis of bioscience or animal science and environmental sciences.

**Final competences**

- 1 Handle information Scope For Growth provides as regards to understanding actual growth and factors that may potentially affect growth rate.
- 2 Design simple experiments to measure the scope for growth in marine animals.

**Conditions for credit contract**

Access to this course unit via a credit contract is determined after successful competences assessment

**Conditions for exam contract**

This course unit cannot be taken via an exam contract

**Teaching methods**

Seminar, Lecture, Seminar: practical pc room classes

**Extra information on the teaching methods**

- Lectures 14

- Computer sessions 18
- Tutorials 8

Following completion of the course, each student will do an independent research work on genomics. There will be a Tutorial to identify a topic of interest. Raw sequence data coming from an experiment designed to meet a specific goal will be provided to each student.

### Learning materials and price

Delivered during the course (free)
