

Seabird and Marine Mammal Population Assessment Techniques (C004313)

Due to Covid 19, the education and assessment methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size *(nominal values; actual values may depend on programme)*

Credits 3.0

Study time 75 h

Keywords

Seabirds, marine mammals, mark recapture, distance, survey techniques

Position of the course

Contents

Knowledge of population size is essential for the management of animal populations. Significant biological, ecological and legislative imperatives exist requiring research into long term trends and current abundance and distribution of marine mammal and seabird populations. This module will introduce learners to the practical and theoretical aspects of visual survey techniques utilised to inform conservation policies and action plans and to support reporting and other legislative requirements

Distance sampling for marine mammal survey

Techniques for surveying seabirds at sea

Mark recapture techniques for population assessment

Species Identification

Survey design, analysis and reporting

Emergent technologies for population assessment

Initial competences

Final competences

- 1 Describe the theoretical basis for visual survey techniques.
- 2 Demonstrate an ability to design, critique and refine survey designs for seabirds and marine mammals.
- 3 Conduct sample visual surveys and utilise appropriate techniques for survey, data storage, analysis and reporting.
- 4 Review the use of emergent technologies such as UAVs in population assessment.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Seminar, Lecture, Fieldwork, Seminar: practical pc room classes

Extra information on the teaching methods

The above concepts will be covered in the theoretical component of the course by means of lectures and interactive classes. The practical part of this course will include a series of in-class practical and computer work, fieldwork and interactions with researchers from the Marine and Freshwater Research Centre

Learning materials and price

none
