Keywords

child, adolescent, typical development, neurodevelopmental disorders, psychopathology.

Position of the course

The aim of the course is to provide students with an overview of the main neurodevelopmental disorders and other psychiatric disorders that occur in children and adolescents.

Contents

- the typical social, emotional and cognitive development.
- the disorders from the manual for classification of psychiatric disorders (DSM-5-TR), occurring in childhood. Particular attention will be paid to the neurobiological developmental disorders with a focus on autism spectrum disorder, attention deficit/hyperactivity disorder, and motor disorders, and further eating disorders, attachment disorders, anxiety disorders, mood disorders, trauma and behavioral disorders.

Initial competences

This course further builds on basic knowledge and insight into developmental psychology.

Final competences

- to understand and describe the typical development of the child.
- to understand and describe the neurodevelopmental disorders as described in DSM-5-TR.
- to understand and describe the other mental disorders that occur frequently in children and adolescents.
- to interpret a physician, psychiatrist, psychological or pedagogical report on a child with neurodevelopmental disorder or other psychological disorder.
- to integrate management of a child with neurodevelopmental disorder or other psychological disorder in his own physiotherapy or psychomotor treatment.
