

## Knowledge Graphs (E018160)

**Course size** *(nominal values; actual values may depend on programme)*

**Credits 3.0**

**Study time 90 h**

### Course offerings and teaching methods in academic year 2026-2027

A (semester 2)	English	Gent	practical	15.0h
			lecture	30.0h

### Lecturers in academic year 2026-2027

Colpaert, Pieter	TW06	lecturer-in-charge
De Meester, Ben	TW06	co-lecturer
Verborgh, Ruben	TW06	co-lecturer

### Offered in the following programmes in 2026-2027

	crdts	offering
<a href="#">Bridging Programme Master of Science in Bioinformatics(main subject Engineering)</a>	3	A
<a href="#">Master of Science in Bioinformatics(main subject Engineering)</a>	3	A
<a href="#">Master of Science in Computer Science Engineering</a>	3	A
<a href="#">Micro-credential Knowledge Graphs</a>	3	A

### Teaching languages

English

### Keywords

Semantic Web technologies, Web Querying, Linked Data, Knowledge Graphs, Open Data, Big Data, Data Spaces, FAIR, information technology, data architecture, HTTP, Solid, RDF, interoperability

### Position of the course

Managing data on one machine for one specific kind of use is fairly straightforward. It is from the moment that that initial dataset needs to be shared with more than one application and needs to be combined with other datasets managed by other organizations on different machines, that more complex computer science and information technology problems arise. In this course we will deep-dive in the current state of the art in creating Knowledge on Web-Scale. Your personal data, data published publicly on the Web and data explicitly shared with you, becomes your Knowledge Graph that applications and services can use to assist you in your day to day activities.

Data scientists and engineers today claim 80% of their time goes to preparing and integrating the data: let us take you on a quest to fully automate data integration.

### Contents

- Open Data
- Web Scraping
- Legal aspects of data reuse
- Findable, Accessible, Interoperable and Reusable data (FAIR)
- Open Data portals
- European Interoperability Framework

The quest for the universal data model

- Knowledge Representation: key-val, resource-based, document-based, property graphs, triple-based
- Linked Data and the RDF data model

- Linked Data and its serializations
- Logic with N3

#### Data Architectures

- Linked Data Fragments
- Event sourcing and Linked Data Event Streams
- RDF Stream Processing
- The Open World Assumption
- Conway's law
- Ontology engineering with RDFS and OWL
- Metadata management with DCAT
- Validating RDF and building application profiles with SHACL and ShEx

#### Web Querying

- An introduction to SPARQL
- Querying over one data store
- Federated querying
- Link Traversal

#### Trust on the Web

- Identity management with Solid-OIDC
- Authorization with WAC and ACP
- Usage control policies with ODRL
- Verifiable credentials
- Personal data management with Solid

Guest Lecture from European data tech companies and data publishers

#### Initial competences

- Being able to read HTTP messages (URL, method, body, response codes, headers...)
- Executing HTTP requests via the browser and the command-line
- Reading and writing data from/in a CSV-file, a JSON-file and relational databases
- Making small JavaScript/TypeScript programs in the browser and Node.js (reading files, performing HTTP interactions)

#### Final competences

- 1 Arguing the positioning, importance, and limitations of open data
- 2 Choosing the appropriate Web API to publish knowledge graphs
- 3 Modeling data as RDF graphs
- 4 Publishing knowledge graph on the Web from raw data
- 5 Designing a data architecture with fully automated data adoption and assessing trade-offs
- 6 Building a Linked Data vocabulary and application profile in RDF
- 7 Interpreting and creating SKOS, RDFS, and OWL constraints
- 8 Interpreting provenance of RDF data
- 9 Performing validation on RDF data
- 10 Querying the Web of Linked Data using Comunica
- 11 Positioning the industry opportunities and challenges on graph data

#### Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

#### Conditions for exam contract

This course unit cannot be taken via an exam contract

#### Teaching methods

Lecture, Practical

#### Study material

None

## Course content-related study coaching

- contact with the lecturers (through email and in person after appointment)
- supervised labs

## Assessment moments

end-of-term and continuous assessment

## Examination methods in case of periodic assessment during the first examination period

Oral assessment open-book, Written assessment open-book

## Examination methods in case of periodic assessment during the second examination period

Oral assessment open-book, Written assessment open-book

## Examination methods in case of permanent assessment

Presentation, Assignment

## Possibilities of retake in case of permanent assessment

examination during the second examination period is possible in modified form

## Extra information on the examination methods

- Non-periodical evaluation
  - lab assignments introduced during the lectures, that need to be submitted through Ufora
  - Peer teaching: a presentation and lecture notes will be evaluated
- Periodical evaluation
  - oral examination
  - written preparation
  - open book and open Web

## Calculation of the examination mark

The final grade is the average of the two parts (exam and non-periodical evaluation).

In case the grade for any part is less than 10/20, the final grade is capped at 9/20.

In case the grade for any part is 7/20 or less, the final grade is capped at 7/20.

For students who have not passed the non-periodical evaluation, an alternative assignment is provided in the second examination period.

## Facilities for Working Students

Possibility to perform an individualized version of the practical sessions, given a timely notification at the start of the semester.
