Keywords

Theory of Relativity, Quantum Physics

Position of the course

This course can be considered as an introduction to the traditional "Modern Physics" course. A short treatment of Einstein's special theory of relativity is given. Special attention goes to the experimental basis of Quantum Physics, emphasizing the limits of the classical physics and the introduction of Quantum Mechanics. The postulates are introduced among with the time dependent Schrödinger Equation. In this lecture, applications are restricted one dimensional problems. More formal mathematical aspects of quantum theory are discussed as an introduction to the follow-up course "Quantum Mechanics II".

Contents

- Introduction to relativity theory: Light in moving frames of reference, The Lorentz transform, Relativistic dynamics, Applications
- Experimental basis of quantum mechanics: Photons, The photo-electric effect, Compton effect, Electron diffraction - De Broglie waves, Bohr's atom model, Wave-particle duality
- Wave function and wave packet - The Uncertainty Relation: Heisenberg's gamma ray microscope, two-slot experiment, free particle
- The Schrodinger equation: Schrodinger equation for free particle, Schrodinger equation for particle in external potential, One-dimensional applications
- The state space: Operators in quantum mechanics
- Postulates: Formulation of postulates, Heisenberg's Uncertainty Relation, Quantum Dynamics, Description in various images
- One-dimensional linear harmonic oscillator: eigen values and eigen states

Initial competences

Physics I and II

Final competences

- 1 Explaining quantisation of observables and the postulates of quantum mechanics.

- 2 Explaining and elucidating wave-particle duality.
- 3 Describing and applying the operator concept in quantum mechanics.
- 4 Having developed a scientific curiosity for quantum mechanics and its applications.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Lecture

Extra information on the teaching methods

Classroom lectures; Classroom problem solving sessions

Study material

Type: Syllabus

Name: Syllabus Quantum Mechanics 1

Indicative price: € 10

Optional: yes

Language : Dutch

Number of Pages : 255

Available on Ufora : No

Online Available : No

Available in the Library : No

Available through Student Association : No

Additional information: The course material for the course Quantum Mechanics 1 consists of a syllabus and slides. The slides will be uploaded to Ufora during the academic year and we offer the opportunity to buy the syllabus.

Type: Slides

Name: Slides Quantum Mechanics 1

Indicative price: Free or paid by faculty

Optional: no

Language : Dutch

Available on Ufora : Yes

Online Available : Yes

Available in the Library : No

Available through Student Association : No
