

Thermal Installations (E028700)

Course size *(nominal values; actual values may depend on programme)*

Credits 6.0

Study time 180 h

Course offerings and teaching methods in academic year 2025-2026

A (semester 1)	English	Gent	lecture	30.0h
			excursion	8.75h
B (semester 1)	Dutch	Gent	excursion	8.75h

Lecturers in academic year 2025-2026

De Paepe, Michel	TW08	lecturer-in-charge
Lecompte, Steven	TW08	co-lecturer

Offered in the following programmes in 2025-2026

	crdts	offering
Master of Science in Electromechanical Engineering(main subject Control Engineering and Automation)	6	A
Master of Science in Electromechanical Engineering(main subject Maritime Engineering)	6	A
Master of Science in Electromechanical Engineering(main subject Mechanical Construction)	6	A
Master of Science in Electromechanical Engineering(main subject Mechanical Energy Engineering)	6	B
Master of Science in Electromechanical Engineering(main subject Mechanical Energy Engineering)	6	A
Master of Science in Chemical Engineering	6	A

Teaching languages

English, Dutch

Keywords

THERMAL INSTALLATIONS

heat exchangers, two phase gas liquid flow, flow regimes, Heat transfer and pressure drop during evaporation and condensation, Steam technology, combined-heat-and-power, cryogenics

Position of the course

Insight in the thermal energy flows in industrial installations

Design of heat exchangers (single and two phase flow) and installations and steam boilers

Operational aspects of thermal systems in industry : CHP, steam networks and cryogenics

Contents

- Classification of heat exchangers
- Design of recuperators: Logarithmic temperature difference, NTU method, Non constant heat transfer coefficient
- Tubular heat exchangers: constructive aspects
- Shell and tube heat exchangers: constructive aspects
- Plate heat exchangers: constructive aspects
- Compact heat exchangers
- Fouling: Fouling types, Results of fouling
- Heat pipes
- Two phase flows: Flow regimes and pressure drop
- Condensation: Condensation modes, Condensers
- Boiling: Critical heat flux, pool boiling, flow boiling

(Approved)

- Steam boilers: Boiler classification, Circulation and construction
- Steam distribution: constructive aspects, steam traps
- Cryogenics
- Decentralised energy production: Combined heat and power

Initial competences

Engineering Thermodynamics, Heat and combustion technique,
Transport phenomena

Final competences

- 1 Pointing out heat exchanger types and their properties
- 2 Designing heat exchangers
- 3 Using software for energy calculations
- 4 Understanding the physics of two phase gas liquid flow
- 5 Analysing complex thermal processes and cycles
- 6 Approaching energy use in an industrial context in a critical way both in a company and in society

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Group work, Seminar, Excursion, Lecture

Extra information on the teaching methods

Lecturing theory, guided exercises on heat exchangers design Excursions to companies

Group work on two-phase flow and on design with software , report to be handed in
2.14.0.0

Study material

Type: Handbook

Name: Heat Exchangers: Selection, Rating, and Thermal Design, Third Edition 2012 by S CRC press

Indicative price: € 50

Optional: no

Author : Sadik Kakaç Hongtan Liu, Anchasa Pramuanjaroenkij

Online Available : No

Available in the Library : Yes

Available through Student Association : Yes

Usability and Lifetime within the Course Unit : regularly

Usability and Lifetime within the Study Programme : one-time

Usability and Lifetime after the Study Programme : regularly

Type: Syllabus

Name: Pdfs of chapters of books which are provided on Ufora

Indicative price: Free or paid by faculty

Optional: no

Available on Ufora : Yes

Online Available : No

Available in the Library : No

Available through Student Association : No

References

- ASME Heat Transfer
- Int Journal of Heat and Mass Transfer

Course content-related study coaching

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Oral assessment, Written assessment

Examination methods in case of periodic assessment during the second examination period

Written assessment

Examination methods in case of permanent assessment

Skills test, Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is not possible

Extra information on the examination methods

During examination period: written theory closed-book exam, ;exercices exam open book

reports on projects: 1 on heat exchanger design, 1 on two phase flow design

Calculation of the examination mark

PE1 reports 4/20 oral theory exam 4/20 exercises exam 12/20

PE2 exercises exam 20/20
