

Recent Trends in Photonics (E030740)

Course size *(nominal values; actual values may depend on programme)*

Credits 4.0 **Study time 120 h**

Course offerings and teaching methods in academic year 2023-2024

A (semester 1) English Gent lecture

Lecturers in academic year 2023-2024

Bogaerts, Wim TW05 lecturer-in-charge
Clemmen, Stéphane TW05 co-lecturer

Offered in the following programmes in 2023-2024

| | crdts | offering |
|---|-------|----------|
| Bridging Programme Master of Science in Photonics Engineering | 4 | A |
| Master of Science in Photonics Engineering | 4 | A |

Teaching languages

English

Keywords

research, photonics

Position of the course

Through this course the student will be confronted with a number of recent topics in photonics through external and internal experts who present a their research or work (in English). Guest lecturers from companies will expose the student to the application of photonics in industry. Furthermore each student is expected to study one topic in more detail based on scientific articles and give a seminar in English for his fellow students. During this course, the student will be able to hone his oral and written communication skills.

Contents

- Seminars: Seminars by external speakers, internal speakers and students
- Visits: company visits, conference visits
- Methodologie: creating a bibliography, presentation techniques

Initial competences

Final competences

- 1 Being able to study a recent trend in photonics in a independent and critical manner.
- 2 Being able to handle large quantities of new information.
- 3 Being able to create a reliable reference list.
- 4 Being able to give an accessible talk for non-specialists.
- 5 Being able to write a short document summarising a recent trend.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Group work, Excursion, Lecture, Independent work, Peer teaching

Extra information on the teaching methods

The course is a combination of lectures/seminars by experts in the field of photonics, and a self-study (or in small groups) of a 'hot topic' in the field. The students should write an overview paper on this topic, and present a short tutorial lecture for their peers.

During the course we will also participate in a scientific conference.

Assessment moments

continuous assessment

Examination methods in case of periodic assessment during the first examination period

Examination methods in case of periodic assessment during the second examination period

Examination methods in case of permanent assessment

Participation, Presentation, Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is not possible

Extra information on the examination methods

During semester: graded oral presentation; graded presentation and paper.

Calculation of the examination mark
