Course Specifications
Valid as from the academic year 2015-2016

Biophotonics (E030930)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Teaching languages

English

Keywords

biophotonics

Position of the course

Exposing the student to various basic concepts in the field of biophotonics, positioning them in an interdisciplinary context

Contents

1 Introduction: necessity of biophotonics, public health, eco preservation, maritime, industrial, domestic, medical, biotechnology, aquatic environments
2 Micro-organisms: bacteria, viruses, protozoa, algae, phylogeny, structure and function
3 Fundamental biomolecules: nucleic acids, amino acids, DNA/RNA replication, transcription, translation, antibodies, antigens, enzymes, fatty acids, carbohydrates
4 Physiology: immune system, nervous system
5 Flow cytometry: principle and applications, cell enumeration, discrimination, heterotrophic, fluorescent in-situ, hybridisation, DNA probes, cell sorting advantages and disadvantages
6 PCR techniques: DNA amplification, molecular probes, real time PCR, DNA hybridisation
7: Microscopy: bright field microscopy, phase contrast microscopy, dark field microscopy, differential interference contrast microscopy, fluorescence microscopy, confocal microscopy, atomic force microscopy, electron microscopy

Course size

(nominal values; actual values may depend on programme)

Course offerings and teaching methods in academic year 2021-2022

| A (semester 1) | English | Gent | lecture | 25.0 h |
|               |         |      |         | demonstration | 5.0 h |

| O (semester 1) | English | Gent |

(Approved)
8 Optical coherence tomography: principles, time-domain OCT, fourier domain OCT, swept-source OCT, optical properties of tissues, system aspects, applications
9 Labeled sensors: sensor requirements, ELISA tests, gold nanoparticle labels, quantum dot labels, bead-based assays, padlock probes
10 Label-free sensors: advantages, surface plasmon sensors, evanescent wave sensors, Mach-Zehnder interferometers, resonant cavities
11 Lab-on-a-chip: principles, DNA microarrays, introduction to microfluidics

Initial competences
- bachelor level physics

Final competences
1. Getting insight in the basics of biology.
2. Acquiring understanding in the principles behind microscopy, cytometry, PCR techniques, imaging techniques, labeled and label-free sensors, lab-on-a-chip.

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
This course unit cannot be taken via an exam contract

Teaching methods
- Demonstration, lecture

Extra information on the teaching methods
- Classroom lectures: part of the lectures will be given in UGent, part of the lectures in the VUB, but there is the option of teleclassing.

Learning materials and price
- Course notes, copies of slides

References

Course content-related study coaching

Evaluation methods
- end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period
- Written examination with open questions

Examination methods in case of periodic evaluation during the second examination period
- Written examination with open questions

Examination methods in case of permanent evaluation
- Participation

Possibilities of retake in case of permanent evaluation
- examination during the second examination period is possible

Calculation of the examination mark
- 100% exams

(Approved)
