

Course Specifications

Valid as from the academic year 2024-2025

Electronic Systems and Instrumentation (E032010)

Course size	(nominal values; actual values may depend on programme)				
Credits 6.0	Study time 180 h				
Course offerings and to	eaching methods in academic ye	ar 2025-2026			
A (semester 2)	Dutch	Gent	lecture practical		
Lecturers in academic	year 2025-2026				
Doutreloigne, Jan			TW06	lecturer-in-charge	
Bauwens, Pieter			TW06	co-lecturer	
Offered in the following programmes in 2025-2026				crdts	offering
Bachelor of Science in Engineering(main subject Engineering Physics)				6	Α
Bridging Programme Master of Science in Engineering Physics				6	А

Teaching languages

Dutch

Keywords

Electronic instrumentation, analog and digital circuits, sensors and actuators, control systems, data-acquisition, system analysis

Position of the course

This course gives an introduction to electronic instrumentation. The course describes the analysis of electronic circuits (digital and analog), principles of electronic measurement, sensors, data-acquisition and signal processing of measurement data.

Contents

- Survey of electronic components and building blocks: active and passive components, analog building blocks, digital building blocks
- Analysis of analog and digital electronic circuits: transistor circuits, op-amp circuits, combinational and sequential digital circuits
- Analysis of complete open-loop and closed-loop electronic instrumentation systems

Initial competences

Electrical circuits and networks

Final competences

- 1 Understand the operation of the basic electronic components
- 2 Analyse basic analog and digital electronic circuits and think in a conceptual, analytical, system-oriented way about them.
- 3 Have the skills to perform numerical simulations of electronic circuits by means of standard models and methods, in particular PSpice.
- 4 Being able to build and experimentally evaluate analog and digital electronic circuits at breadboard level with sufficient accuracy, perseverance and critical reflection.
- 5 Have the skill to communicate about own design of electronic systems in writing and in graphics.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Lecture, Practical

Extra information on the teaching methods

Classroom lectures; Lab sessions

Study material

Type: Slides

Name: Extensive set of detailed PowerPoint slides about 3 chapters that can be downloaded for free from the Ufora website Indicative price: Free or paid by faculty Optional: no Language : Dutch Number of Slides : 370 Available on Ufora : Yes Online Available : No Available in the Library : No Available through Student Association : No

References

 Referenties: E.O. Doebelin, "Measurement Systems", Mc. Graw-Hill, 4th Ed., New York (1990)

Course content-related study coaching

5 scientific coworkers are responsible for the guidance/support during the lab sessions.

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written assessment

Examination methods in case of periodic assessment during the second examination period

Written assessment

Examination methods in case of permanent assessment

Skills test

Possibilities of retake in case of permanent assessment

examination during the second examination period is possible

Extra information on the examination methods

During examination period: written exam, partly closed-book theory, and partly closed-book exercises. Permanent evaluation: individual closed-book lab exam at the end of the semester

(calculations + circuit building + measurements on the circuit).

Calculation of the examination mark

During examination period: written exam that represents 2/3 of the total mark. Permanent evaluation: lab exam that represents 1/3 of the total mark.
