

## General Arrangement, Structural Arrangements and Construction of Marine Structures (E055030)

**Course size** *(nominal values; actual values may depend on programme)*

**Credits 6.0**                                      **Study time 180 h**

**Course offerings and teaching methods in academic year 2023-2024**

|                |         |      |         |
|----------------|---------|------|---------|
| A (semester 2) | Dutch   | Gent |         |
| B (semester 2) | English | Gent | lecture |

**Lecturers in academic year 2023-2024**

|                |      |                    |
|----------------|------|--------------------|
| Rigo, Philippe | TW15 | lecturer-in-charge |
| Lataire, Evert | TW15 | co-lecturer        |

**Offered in the following programmes in 2023-2024**

|  | <b>crdts</b> | <b>offering</b> |
|--|--------------|-----------------|
| <a href="#">Bridging Programme Master of Science in Electromechanical Engineering(main subject Maritime Engineering)</a> | 6            | B               |
| <a href="#">Master of Science in Electromechanical Engineering(main subject Control Engineering and Automation)</a>      | 6            | A               |
| <a href="#">Master of Science in Electromechanical Engineering(main subject Electrical Power Engineering)</a>            | 6            | A               |
| <a href="#">Master of Science in Electromechanical Engineering(main subject Maritime Engineering)</a>                    | 6            | A               |
| <a href="#">Master of Science in Electromechanical Engineering(main subject Maritime Engineering)</a>                    | 6            | B               |
| <a href="#">Master of Science in Electromechanical Engineering(main subject Mechanical Construction)</a>                 | 6            | A               |
| <a href="#">Master of Science in Electromechanical Engineering(main subject Mechanical Energy Engineering)</a>           | 6            | A               |

**Teaching languages**

English, Dutch

**Keywords**

Ships, offshore structures, shipbuilding, freeboard assessment, tonnage measurement, midship section, scantling

**Position of the course**

Increasing the basic technical know-how concerning marine structures, required for engineering staff in maritime organisations such as ship owners, harbour services, dredging companies and classification societies.

**Contents**

- Scantlings according to the rules of the classification societies: structural details for thin-walled structures subject to fatigue loads, longitudinal strength; influence of superstructures on longitudinal strength, midship section design according to the rules of the classification societies
- Shipyard practice: an outline
- Ship equipment: an outline
- Freeboard assessment and tonnage measurement
- A methodology for general design
- Special features of the general and structural design of specialized vessels: Tankers, bulk carriers, container ships, dredgers, tugs, fishing vessels,...

**Initial competences**

Introduction to marine technology, Mechanics of materials, Mechanics of structures, Turbo machinery, Piston machinery

## Final competences

- 1 Master the terminology in relation to maritime constructions, structure and exploitation.
- 2 Description and naming of the relevant parts of maritime constructions.
- 3 To be able to explain the relationship between the load, the response and the strength of maritime constructions.
- 4 Gaining insights in the different failure mechanisms as a result of the load on a maritime construction.
- 5 Understand the calculation methodology for the design of basic parts and elements of maritime constructions.
- 6 To be able to explain the mathematical and scientific basis in relation to used formulae in the design of a maritime construction.
- 7 Possess basic knowledge, required for the design, construction, control or exploitation of maritime constructions.
- 8 Assessment and estimation of the strength of parts and elements of a maritime construction.
- 9 Apply direct calculation, based on material strength, and the use of class rules for the design of maritime constructions.

## Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

## Conditions for exam contract

This course unit cannot be taken via an exam contract

## Teaching methods

Lecture, Independent work

## Extra information on the teaching methods

Lectures and guided project about the specific topics of the courses content, with the possibility of asking questions.

If possible, the lectures are supplemented with visits to relevant research institutions and companies.

## Learning materials and price

Syllabus, price 20 EUR

## Course content-related study coaching

### Assessment moments

end-of-term and continuous assessment

### Examination methods in case of periodic assessment during the first examination period

Oral assessment

### Examination methods in case of periodic assessment during the second examination period

Oral assessment

### Examination methods in case of permanent assessment

Assignment

### Possibilities of retake in case of permanent assessment

examination during the second examination period is possible in modified form

### Extra information on the examination methods

During examination period: oral closed-book exam. During semester: graded project reports.

### Calculation of the examination mark

Specific conditions: Non periodical evaluation: 33%

If for one of the abovementioned items a mark of less than 5 on 20 is obtained, the student cannot pass for the entire course. The final mark is in that case the minimum of 9/20 and the abovementioned weighted result.
