Long Internship in Photonics (EO99232)

Course Specifications
Valid as from the academic year 2021-2022

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size
- Credits: 10.0
- Study time: 300 h
- Contact hrs: 15.0 h

Course offerings and teaching methods in academic year 2021-2022
- A (year)
  - English
  - Gent
  - work placement
  - 7.5 h
- B (semester 1)
  - English
  - Gent
  - work placement
  - 7.5 h

Lecturers in academic year 2021-2022
- Beeckman, Jeroen TW06 lecturer-in-charge
- Morthier, Geert TW05 co-lecturer
- Ottevaere, Heidi VUB co-lecturer

Offered in the following programmes in 2021-2022
- Bridging Programme Master of Science in Photonics Engineering 10 A, B
- Master of Science in Photonics Engineering 10 A, B

Teaching languages
- English

Keywords
- Training, photonics, internship

Position of the course
- The student spends a period of at least 10 weeks in a company, research institute or university (not UGent or VUB) as a trainee with the objective of gaining practical experience. The subject of the training needs to be related to photonics. The training is concluded by a training report. This course can not be combined in the curriculum with the Short Internship in Photonics (EO99221).
- The subject of the internship must be distinctively different from the master thesis subject.
- For the regulations, see https://www.ugent.be/ea/en/for-degree-students/your-studies-in-ghent/traineeships

Contents
- Training, training report.
- The traineeship focuses on the industrial and/or research engineering activities of the student. The student is mastering the knowledge and possesses or acquires the technical skills needed to successfully accomplish a variety of tasks. The training entity supervisor assigns a wide range of tasks to the trainee to broaden the student's experience and horizon. In a hands-on way, the student thus familiarizes with the company's task chain. The student is a versatile trainee able to analyse problems and implement solutions. The student's communicative ability is well-developed and he/she can work in an international team.
- The student is a responsible person showing the necessary reliability, autonomy and initiative.
- The student can use all the above mentioned skills to perform an internship and act as is
expected from a young engineer.

Initial competences
Basic concepts of photonics

Final competences
1 Master and apply advanced knowledge in the own field of engineering in case of complex problems.
2 Ability to work in a team in a multi-disciplinary working-environment and start to take the lead.
3 Project planning: ability to formulate objectives, report efficiently, keep track of end-goals and progress of the project.
4 Report on technical or scientific subjects orally, in writing and in graphics.
5 Flexibility to adapt to changing professional circumstances.
6 Have an insight in the photonics industry and in the role of photonics in the scientific and technological evolution of society

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
This course unit cannot be taken via an exam contract

Teaching methods
Work placement

Learning materials and price

Evaluation methods
continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Examination methods in case of periodic evaluation during the second examination period

Examination methods in case of permanent evaluation
Report

Possibilities of retake in case of permanent evaluation
examination during the second examination period is possible

Extra information on the examination methods
Continuous assessment
A concise progress report (1 to 2 pages) is sent to the internship supervisor and the promotor after 5 weeks of internship.
Final report. This report must follow the rules for an internship report as mentioned in the internship regulations of the Faculty of Engineering and Architecture, with a minimum of 20 pages.
A final presentation of about 20 minutes for the internship promotor.

Calculation of the examination mark
The evaluation mark is based upon on the feedback provided by the supervisor of the training entity, the final report and the presentation.

(Approved)
