**Teaching languages**

English, Dutch

**Keywords**

Co-creation; Transdisciplinary research through design; Design thinking;

Entrepreneurship; Communication skills

**Position of the course**

An important goal of the university is to stimulate multi-perspectivism.

Transdisciplinary research is an appropriate method to bring motivated

stakeholders from different education programs and disciplines together.

Transdisciplinary collaboration is such interrelated that the individual disciplines

can not be distinguished. Problems are no longer solved by using elements of all

disciplines but through collaboration and integration. Interaction and mix are

essential parameters of transdisciplinarity.

At UGent, there is a wide range of highly ranked expertise and knowledge in many

disciplines, but often they are only recognized and applied within the specific

domain or education program. The envisaged transdisciplinary project wants to

break these barriers by merging expertise of different research domains. In order

to maximize the effect of transdisciplinarity, a yearly social theme will be selected to allow collaboration.

An overview of theoretical principles of cocreation, design thinking and multidisciplinary will be offered and verified by a specific project that a student will choose out of a list of proposals, according to relevant interest and background. The project follows the basic methodology of design thinking that has user-centered design as a main focus:

- Discover
- Define
- Develop
- Deliver

This process is performed iteratively.

In addition, a co-creation methodology is adopted in which all student-stakeholders out of different disciplines get an equal and significant role and interact with each other accordingly in order to integrate all results appropriately.

The Foundry and design campus Kortrijk + on-line sessions will be the designated venues for lectures and to develop and execute the project work.

## Contents

### Theory, exercises and workshops

A multitude of lectures and workshops are organised around the following topics:

#### *Semester 1:*

- 1 Overview: Focus on diverging and converging, design thinking and co-creation
- 2 Discover: Empathy, design for dialogue, conversation(s)
- 3 Define: System oriented design-thinking, design variables, causal feedback
- 4 Develop: User testing by (re)search, inquiries and observations
- 5 Deliver: reporting and interactive presentations

#### *Semester 2:*

- 1 Overview: Focus on iterating by feedback and multi-perspectivism
- 2 Discover: Act ethically and sustainable (SDG)
- 3 Define: Value (co-)creation, value (co-)destruction at the level of user,s organisation, communities, society, nature and environments
- 4 Develop: stakeholder testing through participatory design and co-creative "prototyping & capturing" methods
- 5 Deliver: Inspiring en engaging stakeholders through communication and conversations

Lectures are given by a team of experts afrom one domain. For each subject, an introductory lecture will be given followed by a debate from all involved disciplines.

### On-line learning platform co-creation planet

Though workshops hands-on training, and self-tuition, using the platform <http://cocreationplanet.eu>, students of diverse disicplines will learn to discover and apply methods, tools and techniques using specific cases, examples, and serious games. In addition to learning to understand the nature of cocreation, students will design proper games, according to the insights obtained during the group work / project.

Each student will log the on-line learning trajectory through a portfolio.

### Group work - project

An end-user or group of en-users is the central focus when performing group work. Starting from the question posed by a specific client, company or organisation, the design thinking process is performed iteratively (empathize, define, ideate, prototype, test with the client and all involved stakeholders).

Transdisciplinarity, integration, interaction and communication are central themes. Prototypes are used as a particular integration and communication tool. This method of materialization gives all stakeholders the skills and mental space to concretize ideas and come to new insights.

During semester 1, the trajectory of design thinking will be followed once through a design sprint, resulting in a preliminary concept.

During semester 2, insights will be broadened and deepened through multiple iterations. Focus is put on (co-)creating added value for all involved stakeholders.

The project will be coached by a daily supervisor, acting as a coach. Various techniques and design thinking methods and tools will be available and practiced in order to achieve the predefined goal.

Attendance and active participation during these activities are mandatory.

### Initial competences

Basic knowledge about methods, tools and techniques from student's own research discipline.  
Be open to diverse aspects of multi-perspectivism (transdisciplinarity, entrepreneurship, deontology, communication, design thinking).

### Final competences

- 1 Observe and control behavior in multiple context and achieve a level of repeatability by iteratively applying all steps of design thinking.
- 2 Empathize and conceive real requirements of multiple stakeholders: individual clients, communities, society, nature and environment
- 3 Use complementary skills and resources of the team in an effective and creative manner.
- 4 Design a dialogue/interaction between all involved stakeholders.
- 5 Identify and use all relevant social, economic and technical aspects.

### Conditions for credit contract

Access to this course unit via a credit contract is unrestricted: the student takes into consideration the conditions mentioned in 'Starting Competences'

### Conditions for exam contract

This course unit cannot be taken via an exam contract

### Teaching methods

Group work, Seminar

### Extra information on the teaching methods

#### Lectures & Workshops:

A multitude of lectures and workshops are organised focusing on a theme as indicated above. Lectures are given by a team of experts from one domain. For each subject, an introductory lecture will be given followed by a debate from all involved disciplines.

Through workshops hands-on training, and self-tuition, using the platform <http://cocreationplanet.eu>, students of diverse disciplines will learn to discover and apply methods, tools and techniques using specific cases, examples, and serious games. In addition to learning to understand the nature of cocreation, students will design proper games, according to the insights obtained during the group work / project.

Each student will log the on-line learning trajectory through a portfolio.

Attendance and active participation are mandatory for these activities.

#### Group work and project:

The project will be coached by a daily supervisor, acting as a coach. Various techniques and design thinking methods and tools will be available and practiced in order to achieve the predefined goal.

Attendance and active participation are mandatory for these activities.

All intermediate results are communicated towards all team members, mentor and involved stakeholders using an online platform that enables to follow-up on the progress of the project. There is also a two-weekly meeting planned on initiative of the students. Each meeting results in a report with minutes, appointed tasks and deadlines.

Each student must share the obtained results via the online platform and report on the progress on a regular basis.

The mentor/coach will follow a predefined roadmap to coach and advise in direct response with the responsible teacher. On a regular basis, the responsible teacher will monitor with the coach/mentor the progress and adjust the targets whenever necessary.

At the end of the project, all results are compiled in a final report and the results are presented to a professional jury.

### Learning materials and price

Learning material will be offered through the electronic learning environment and will be available in the foundry and industrial design center Campus Kortrijk.  
Keep into account travel expenses (Ghent/Kortrijk) and prototyping costs (estimated 50 EURO per student).

## **Course content-related study coaching**

### **Assessment moments**

end-of-term and continuous assessment

### **Examination methods in case of periodic assessment during the first examination period**

Report, Assignment

### **Examination methods in case of periodic assessment during the second examination period**

Report, Assignment

### **Examination methods in case of permanent assessment**

Report, Participation, Peer assessment, Job performance assessment

### **Possibilities of retake in case of permanent assessment**

examination during the second examination period is not possible

### **Extra information on the examination methods**

#### **Permanent evaluation**

Active participation: a student may not limit him/herself to be present in the lectures, workshops and project sessions, but should actively participate in dialogues, and performs a significant part of the project work. The latter is checked by a prestation table that is included in the final report (work piece).

Performance assessment: This aspect will be evaluated by observing the student's behaviour such as entrepreneurial spirit, critical reflection, positive communication and the will to collaborate towards a common goal. Additionally, the student will be assessed whether he/she is able to operate in a transdisciplinary team and is able to perform other tasks than only tasks within his/her own discipline. Finally, the student must be able to integrate different disciplines.

Intermediate report and final report: all project results are collected on an online documentation platform, that gives an overview of all project steps that were performed. Each student has to do a significant part of the reporting process.

Peer evaluation: your team mates will make a peer evaluation that evaluates on individual effort, communication skills and the will to contribute to the common goals from the own perspective, knowledge and expertise.

Learning and applying all theories, insights, methods during lectures or using the on-line learning platform co-creation planet will be kept in a portfolio.

#### **Periodic evaluation**

*PE\_A1: final presentation, report, work piece (prototype) at the end of semester 1 & 2*

The work piece comprises a final documentation which the most significant aspects of the realized project is described. In addition, there is a working prototype that was tested with the involved end-user and assessed from a number of related disciplines that have to be defined in advance. Finally, the project team will present the obtained results to an external jury.

*PE\_B1: Evaluation of lectures and workshops at the end of semester 1 & 2*

Each student makes an essay (report) that gives a critical reflection on the themes that were addressed during lectures and workshops. The validity of the essay will be judged by several staff members from within the research discipline of the student.

#### **Division Dutch / English:**

- Seminars and lectures: in English
- Group work / Project: coaching in English or Dutch according to the preference of the students
- Essay in English

- Final presentation, paper and reports in English

#### **Calculation of the examination mark**

- NPGE: 40%.
- PGE\_A1: 30%
- PGE\_B1: 30%

In order to succeed, the student must obtain a score for each part  $\geq 9$ . If this condition is not met, the score will be reduced to a non-tolerable score.
