**Teaching languages**

Dutch

**Keywords**

SQL, database systems, data modelling, database design

**Position of the course**

This course is intended as a classic basic course in which on the one hand the fundamentals of relational databases are studied and on the other hand considerable attention is paid to the practical use of relational databases, with main emphasis on SQL, EER modeling and database design.

**Contents**

- Introduction: Databases and database systems
- Conceptual database design: The (extended) 'entity relationship' model
- Relational databases: The relational database model, logical database design, physical database design and SQL
- Object technology in databases: SQL:2011
- NoSQL database systems
- Working with database systems: Security, Failure and recovery, Concurrency control

**Initial competences**

Strict prerequisites: none

Advisory initial competences:

Knowing the basic concepts of information technology, as taught in the part basic knowledge of "Informatica I".

Having some programming experience and knowledge of data structures, as e.g. learned in "Object Oriented Programming".

It is recommended to simultaneously follow the course "Data structures".

**Final competences**

- 1 Being familiar with the basic concepts of database systems and databases.
- 2 Designing, setting up and maintaining relational databases.
- 3 Manipulating and querying relational databases: applying standard SQL techniques faultlessly.
- 4 Understanding how object technology can be used in relational databases.
- 5 Understanding how relational database systems work.
- 6 Having insight into NoSQL systems.

**Conditions for credit contract**

Access to this course unit via a credit contract is determined after successful competences assessment

**Conditions for exam contract**

This course unit cannot be taken via an exam contract

**Teaching methods**

Seminar, Lecture

**Extra information on the teaching methods**

Online supervised exercises: SQL, EER-modelling and database design.

**Learning materials and price**

Handbook: G. De Tré, Principes van databanken, Pearson Education Benelux, Amsterdam, 2017 (ISBN:978-90-430-3580-4); indicative price: 50 EURO (Dutch) Additional course material is available on Ufora

**Course content-related study coaching**

All exercise courses are supported by assistants.

An appointment with the lecturer or assistants can always be made.

**Assessment moments**

end-of-term and continuous assessment

**Examination methods in case of periodic assessment during the first examination period**

Written assessment

**Examination methods in case of periodic assessment during the second examination period**

Written assessment

**Examination methods in case of permanent assessment**

Skills test, Assignment

**Possibilities of retake in case of permanent assessment**

examination during the second examination period is possible

**Extra information on the examination methods**

Periodic evaluation:

- Open questions on theory
- Exercises

Non-periodic evaluation:

- SQL database querying
- Database design project

**Calculation of the examination mark**

First and second exam period:

Periodic evaluation: 60%; non-periodic evaluation: 40%.

The end score is the weighted mean of the periodic and non-periodic evaluation. Students can only pass this course if they obtain a minimum score of 10/20 for both parts of the evaluation. If students obtain less than 10/20 for at least one of the parts, the following rules apply:

- If one obtains an 8/20 or 9/20 for at least one part of the evaluation, one cannot pass the whole of the course. If the final score would nevertheless be a mark of 10 or more out of 20, this will be reduced to the highest unsuccessful mark, namely 9/20.
- If one obtains less than 8/20 for at least one part of the evaluation, one cannot pass the whole of the course. If the final score would nevertheless be a figure of 8 or more out of 20, this will be reduced to the highest non-deliberable mark, namely 7/20.

For a score of 10/20 or more on one of the parts, there is a mark transfer to the second exam period.

The score of the non-periodic evaluation is the weighted average obtained from 60% SQL database querying and 40% database design project.

## **Facilities for Working Students**

This course has an online exercise system for SQL.
