**Teaching languages**

Dutch

**Keywords**

SQL, database systems, data modelling, database design

**Position of the course**

This course is intended as a classic basic course in which on the one hand the fundamentals of relational databases are studied and on the other hand considerable attention is paid to the practical use of relational databases, with main emphasis on SQL, ER modeling and database design.

**Contents**

- Introduction: Databases and database systems
- Conceptual database design: The 'entity relationship' model
- Relational databases: The relational database model, logical database design, physical database design and SQL
- Object technology in databases: SQL:2011
- NoSQL database systems
- Working with database systems: Security, Failure and recovery, Concurrency control

**Initial competences**

Strict prerequisites: none

Advisory initial competences:

Knowing the basic concepts of information technology, as taught in the part basic knowledge of "Informatica I".

Having some programming experience and knowledge of data structures, as e.g. learned in "Object Oriented Programming".

It is recommended to simultaneously follow the course "Data structures".

**Final competences**

- 1 Being familiar with the basic concepts of database systems and databases.
- 2 Designing, setting up and maintaining relational databases.
- 3 Manipulating and querying relational databases: applying standard SQL techniques faultlessly.
- 4 Understanding how object technology can be used in relational databases.
- 5 Understanding how relational database systems work.
- 6 Having insight into NoSQL systems.

**Conditions for credit contract**

Access to this course unit via a credit contract is determined after successful competences assessment

**Conditions for exam contract**

This course unit cannot be taken via an exam contract

**Teaching methods**

Seminar, Lecture

**Extra information on the teaching methods**

Supervised exercises: SQL, ER modelling, database design and functionality of a dbms.

**Study material**

Type: Handbook

Name: Principles of databases, 3e edition

Indicative price: € 52

Optional: no

Language : Dutch

Author : Guy De Tré

ISBN : 978-9-04304-157-7

Number of Pages : 580

Available through Student Association : Yes

Usability and Lifetime within the Course Unit : intensive

Usability and Lifetime within the Study Programme : regularly

Usability and Lifetime after the Study Programme : occasionally

**Course content-related study coaching**

All exercise courses are supported by assistants.

An appointment with the lecturer or assistants can always be made.

**Assessment moments**

end-of-term and continuous assessment

**Examination methods in case of periodic assessment during the first examination period**

Written assessment

**Examination methods in case of periodic assessment during the second examination period**

Written assessment

**Examination methods in case of permanent assessment**

Skills test

**Possibilities of retake in case of permanent assessment**

examination during the second examination period is possible

**Extra information on the examination methods**

Periodic evaluation:

- Open questions on theory
- Exercises

Non-periodic evaluation:

- SQL database querying (1st examination period: 2 tests in PC class: 2nd exam period: 1 test in PC class)

**Calculation of the examination mark**

First and second exam period:

Periodic evaluation: 75%; non-periodic evaluation: 25%.

The end score is the weighted mean of the periodic and non-periodic evaluation.

**Facilities for Working Students**

This course has an online exercise system for SQL.
