### Teaching languages

English

### Keywords

Governance of security, management of security, security policies, private and public cooperation, discretion of security actors, citizen participation.

### Position of the course

The aim of this course is for the students to gain insight into governance and security issues and to be capable of formulating personal, original and critical reflections about these issues. In this, the students should be able to transcend national frames of reference and reflect from an (inter)national and (inter)disciplinary point of view on security topics.

### Contents

This course approaches security issues from a governance perspective. The issues have been studied by the research group 'Governing and Policing Security' ([www.gaps-ugent.be](http://www.gaps-ugent.be)) and are approached along three main lines of thought:

- The study of the growth, development and social meaning of the concept of insecurity/security (the transition from objective to subjective feelings of insecurity, the notion of nuisance, mistrust in governments...) alongside the changing areas of social relevance with which the idea of insecurity has become associated in late modern society (from traditional forms of criminality to food safety, environmental threat, corruption, terrorism). Specific attention is paid to the implications of these phenomena with regards to the protection of human rights. Knowledge and critical reflection is central to each of the case studies about the security paradigm.
- The study of the administrative and judicial policies which relate to the changing paradigm of insecurity/security, paying particular attention to the problems of integration between: public versus private conduct of policy; centralised versus decentralised conduct of policy; international, rural and local conduct of policy and the development of sector specific policies in contrast to integral or integrated policy making.
- The study of the implications for law and order and crime prevention policy execution of this evolving paradigm of insecurity/security, with a specific focus on

the decreasing rigidity of organisational borders and competence displacement in its implementation (police forces; administrative supervision holders; new security professions; the army; information services; inspection and detection services; private security, guarding and detection, self-regulating agencies; active citizen participation etc. The security issues in this course have been studied

### **Initial competences**

### **Final competences**

- 1 Insights into the state of the art of theory and research on governing and policing (in)security in late-modern society and more in particular about the broadening of its social meaning (of objective insecurity to 'subjective' feelings, nuisance, distrust in governments,...) and the changes in its social relevance (of both 'traditional' forms of criminality and environmental threats, radicalization, terrorism,...).
- 2 The ability to find and consult scientific sources on governing and policing security (e.g. literature, legislation, other documents) and critically analyze them
- 3 The ability to evaluate empirical research on governance and policing security.
- 4 The ability to reflect on one's own thoughts about the governance of security and to keep an open mind about other opinions and new ideas
- 5 The ability to assess the implications of theories on the governance of security for policy development and implementation
- 6 The ability to conceptualize a large diversity of societal issues in terms of governance of security concepts
- 7 The ability to apply research methods and techniques and design a small-scale research on issues related to the governance of security.

### **Conditions for credit contract**

Access to this course unit via a credit contract is determined after successful competences assessment

### **Conditions for exam contract**

This course unit cannot be taken via an exam contract

### **Teaching methods**

Online seminar, Online lecture, Seminar, Lecture, Self-reliant study activities

### **Extra information on the teaching methods**

During the seminars interactions between the students is essential to develop their critical thinking and application of knowledge. Discussion, short assignments and guest lectures are used.

### **Learning materials and price**

There is no handbook available. The teaching material consists of the powerpoint presentations of each class and a reader with scientific literature.
