

Cognitive Neurosciences (H002001)

Course size *(nominal values; actual values may depend on programme)*

Credits 5.0 **Study time** 150 h **Contact hrs** 30.0h

Course offerings and teaching methods in academic year 2022-2023

A (semester 1) English Gent microteaching 30.0h

Lecturers in academic year 2022-2023

Caspar, Emilie PP02 lecturer-in-charge
Sahan, Muhammet Ikbal PP02 co-lecturer

Offered in the following programmes in 2022-2023

	crdts	offering
Master of Science in Psychology(main subject Theoretical and Experimental Psychology)	5	A
Exchange Programme in Psychology	5	A

Teaching languages

English

Keywords

neuroscientific methods, cognitive functions

Position of the course

Cognitive Neurosciences is a specialist course in the master Theoretical and Experimental Psychology. Building on the bachelor course Neuropsychology, the possibilities and limitations of the neuroscientific methods that are used to study cognitive functions are studied in further depth.

Contents

Depending on recent developments in the domain of cognitive neurosciences a number of themes will be selected, from the following research areas

- visual perception
- emotion
- cognitive control
- consciousness
- social cognition
- language
- numerical cognition
- memory

The themes will be studied against the background of different research methods:

- single-cell recording
- functional imaging (fMRI)
- electrophysiological measurements
- transcranial magnetic stimulation

Special attention will be given to the advantages and limitations of each of these techniques and to how these limitations are compensated by other techniques

Initial competences

This course unit builds on certain course competencies of Neuropsychology.

Final competences

- 1 Being able to critically evaluate findings in the cognitive neurosciences.
- 2 Being able to design empirical studies.
- 3 Being able to situate research findings in a multidisciplinary context.
- 4 Being able to independently process the relevant literature.

- 5 Knowing strengths and weaknesses of different research methods.
- 6 Being able to employ the strengths of a research method.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Microteaching

Extra information on the teaching methods

Students are divided in small groups. For each class, two research articles with opposed conclusions are used. In light of these articles each small group has to perform one of the following tasks:

- presentation of first paper - presentation of second paper
- discussion
- design a research proposal to solve the controversy

Learning materials and price

Selected literature. Cost: 10 EUR

Course content-related study coaching

- * Interactive support using Ufora.
- * By appointment.

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Assignment

Examination methods in case of periodic assessment during the second examination period

Oral examination

Examination methods in case of permanent assessment

Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is possible in modified form

Extra information on the examination methods

Evaluation of tasks during seminars

For the non-periodical evaluation there is the possibility for an alternative exam in the second examination period. Description:

New task with oral presentation.

Feedback on the non-periodical evaluation:
immediate feedback during seminars.

Calculation of the examination mark

A combination of periodic evaluation (8/20) and permanent evaluation (12/20).
Students who eschew one or more parts of the evaluation can no longer pass the course. Final scores will be reduced to the highest non-deliberative quotation (7/20) in case the final score is higher.
