Keywords

Historical and conceptual issues in psychology

Position of the course

The course Foundations of Psychology is a supporting course in the undergraduate psychology program and provides students with information about how the psychology program was created. It is part of the block Models in Psychology, which focuses on understanding, explaining and predicting THE human being. Additionally, students participate in three studies, giving them insight into the types of studies psychologists run and how participants experience and respond to those studies.

Contents

This course covers the following topics:

- Thinking in ancient cultures
- The scientific revolution in the 17th century
- 18th and 19th precursors to a scientific psychology
- Establishing psychology as an independent academic discipline
- Strengthening the scientific standing of psychology: Behaviorism and cognitive psychology
- The input from brain research
- The mind-brain problem, free will, consciousness
- How did psychology affect everyday life: The history of applied psychology
- What is a science and is psychology a science?
- Psychology and society
- Participation in psychological research
- Scientific literature and databases

Initial competences

This course unit builds on certain course competencies of General psychology.

Final competences

- 1 Students understand the developments that led to the emergence of the scientific approach.
- 2 Students understand why psychology identified itself with the sciences.
- 3 Students understand how brain research contributed to psychological knowledge.
- 4 Students can think critically about concepts such as the mind-brain problem, free will and consciousness.
- 5 Students can think critically about how psychology influenced society and in turn was influenced by society.
- 6 Students can think critically about what science is and to what extent psychology belongs to science.
- 7 Students can think critically about what it entails to participate in scientific psychological research.
- 8 Students can use databases like the Web of Science and answer scientific questions on the basis of the scientific literature.

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written examination with multiple choice questions

Examination methods in case of periodic assessment during the second examination period

Written examination with multiple choice questions

Examination methods in case of permanent assessment

Participation

Possibilities of retake in case of permanent assessment

examination during the second examination period is not possible

Extra information on the examination methods

A period-specific evaluation + mandatory participation in the non-period-specific exercises (3 experiments). The experiments must be finished at the latest by the end of week 12 of the second semester. Ideally, they should be finished before the Easter holidays, because after that no more studies can be guaranteed to take part in.

Failure to participate in either part of the evaluation results in a fail for the entire course unit. If one has not participated in all three experiments, one cannot get a score on the exam.

Calculation of the examination mark
