

## Critical Metals and Minerals (I002197)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

**Course size** *(nominal values; actual values may depend on programme)*  
**Credits** 5.0      **Study time** 150 h      **Contact hrs** 45.0 h

### Course offerings in academic year 2022-2023

A (semester 1)      English      Gent

### Lecturers in academic year 2022-2023

Jonsson, Erik      UPPSALOT lecturer-in-charge

### Offered in the following programmes in 2022-2023

	crdts	offering
<a href="#">International Master of Science in Sustainable and Innovative Natural Resource Management</a>	5	A

### Teaching languages

English

### Keywords

### Position of the course

### Contents

This course provides an overview of the principles of classification and assessment of critical metals and minerals and their application globally, and specifically within the EU. The “eak metal” concept will feature. The supply of critical metals and minerals will be discussed. The mineralogy of critical metals, the metallogenetic context of present and near-future deposit types for critical metals and minerals, as well as deposit classification and distribution, will be covered. Problems surrounding substitution and recycling potential will be discussed. Individual student projects are focused on certain types of critical metal and mineral deposits, their character and origin, and include evaluating their present and future potential.

### Initial competences

Entry requirements – *same as masters programme*

### Final competences

- 1 able to: Describe the background of the concept of critical metals and minerals, and their selection as such within an EU perspective.
- 2 able to: Describe the most important critical metal minerals, key metallogenetic processes responsible for the formation of deposits of critical metals and minerals, and their geological context.
- 3 able to: Evaluate geological constraints on global critical metal and mineral supply responses.
- 4 able to: Explain the demand and applications for these metals, and motivate their exploration and mining in a European context.

### Conditions for credit contract

This course unit cannot be taken via a credit contract

### Conditions for exam contract

This course unit cannot be taken via an exam contract

### Teaching methods

Lecture, practicum, project, seminar

**Extra information on the teaching methods**

Lectures, individual project work, seminars, practicals, literature studies.

**Learning materials and price****References****Course content-related study coaching****Evaluation methods****Examination methods in case of periodic evaluation during the first examination period**

Oral examination, participation

**Examination methods in case of periodic evaluation during the second examination period****Examination methods in case of permanent evaluation****Possibilities of retake in case of permanent evaluation**

examination during the second examination period is possible

**Extra information on the examination methods**

The course is graded based on the written and oral presentations of an individual project, active participation/feedback during seminars and a home-exam.

**Calculation of the examination mark**
