

# Course Specifications

Valid in the academic year 2024-2025

# Blue Growth: An Interdisciplinary Approach to Research and Innovation in the Marine Environment (1002603)

Course size

Credits 3.0

(nominal values; actual values may depend on programme) Study time 90 h

Course offerings in academic year 2024-2025

Lecturers in academic year 2024-2025

Offered in the following programmes in 2024-2025

offering

crdts

#### Teaching languages

English

#### Keywords

Blue growth, marine ecosystems, coastal engineering, blue biotechnology, aquaculture, marine pollution and waste solutions, and wind, wave and tidal energy

# Position of the course

This course is reflecting (1) the world-wide increase in maritime and marine research and development activities and (2) important strategic decisions made by the EU and the UN in recent years to protect our oceans and seas (Decade of the Ocean, Sustainable Development Goals). The course will focus on fundamental and applied research and innovation areas concerning the threats and opportunities of marine systems in a changing global environment.

## Contents

The course will cover a general introduction to both maritime engineering and (applied) marine bio-engineering aspects of recent developments in the sustainable use of marine (eco)systems: Maritime engineering:

- Wind operation
- Wind energy
- Wave and tidal energy
- Coastal protection
- Harbour construction
- Data and information resources for blue growth operators
- Marine (applied) bio-engineering:
- Aquaculture
- Marine litter & waste solutions
- Building with nature
- Marine spatial planning
- Offshore multi-use platforms,
- Blue biotechnology

Students can then select one case-study or topic for in-depth study and analysis through micro-teaching and individual project work during the course.

#### Initial competences

(Applied) Marine ecology, General Chemistry, General Physics

#### **Final competences**

1 Insight in the world-wide increase in maritime and marine R&D and valorization

activities

- 2 Knowledge on the fundamental and applied research and innovation areas of the blue economy
- 3 Up to date insights into current developments in Blue Growth research and application areas

#### Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

# Conditions for exam contract

This course unit cannot be taken via an exam contract

# **Teaching methods**

Lecture, Independent work, Peer teaching

#### Study material

None

# Course content-related study coaching

#### Assessment moments

end-of-term and continuous assessment

#### Examination methods in case of periodic assessment during the first examination period

Oral assessment, Assignment

# Examination methods in case of periodic assessment during the second examination period

Oral assessment, Assignment

#### Examination methods in case of permanent assessment

Participation, Assignment

#### Possibilities of retake in case of permanent assessment

not applicable

#### Extra information on the examination methods

End of term assessment (final exam assignment, oral examination): 60%; continous assessment (assignment, participation): 40%;

# Calculation of the examination mark

*Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.*
