

Human and Animal Biotechnology (I002613)

Course size *(nominal values; actual values may depend on programme)*

Credits 5.0 **Study time 150 h**

Course offerings in academic year 2023-2024

A (semester 2) English Gent

Lecturers in academic year 2023-2024

Vanrompay, Daisy LA22 lecturer-in-charge

Offered in the following programmes in 2023-2024

	crdts	offering
Master of Science in Bioscience Engineering: Cell and Gene Biotechnology	5	A
Exchange Programme in Bioscience Engineering: Cell and Gene Biotechnology (master's level)	5	A

Teaching languages

English

Keywords

1 Cell and tissue engineering, 3D culturing, gene expression, biotechnological drugs, gene therapy, vaccinology, nanobodies

Position of the course

This course aims to give students an overview of the main aspects of human and animal biotechnology and its related techniques and applications

Contents

1) general aspects of cell and tissue engineering, 2) 3D culturing, organoids, 3) embryology and stem cells, 4) gene transfer and expression in eukaryotic cells, 5) production of classic and recombinant vaccines, including DNA and mRNA vaccines, 6) nanobody engineering, 7) gene therapy, 8) recombinant drugs and their registration

Initial competences

Human and Animal Biotechnology builds on certain learning outcomes of course units Microbiology, Cell Biology, Gene Technology and Molecular Diagnostics; or the learning outcomes have been achieved differently.

Final competences

- 1 The student possesses broad knowledge, at an advanced level in a number of basic disciplines in relation to biomedical applications
- 2 The student gains the necessary skills for the manipulation of human and animal cells and their tissues
- 3 The student gains the necessary skills for gene expression in eukaryotic cells
- 4 The student can design and implement strategies for the development of recombinant drugs and their applications
- 5 The student is able to assess new scientific developments in genetic engineering and their applications in a scientific and socio-economic context
- 6 The student is aware of ethical and confidentiality aspects of some human and animal biotechnology applications

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Lecture, Practical, Independent work

Extra information on the teaching methods

Theory: lecture using power point presentations which will be made available via the electronic learning platform and also movies on the topic. Practical: biotechnological engineering techniques focused on the contents of the course and to be performed by the student in the laboratory. Master's dissertation: possibility to prepare a Master's dissertation.

Learning materials and price

Course book. Estimated price 20 euro

Course content-related study coaching

Teacher and assistant available for student counseling

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written assessment, Assignment

Examination methods in case of periodic assessment during the second examination period

Written assessment, Assignment

Examination methods in case of permanent assessment

Participation, Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is not possible

Extra information on the examination methods

Lectures: written examination

Practical: written assignment and participation

Calculation of the examination mark

Lectures: 90% and practical 10%

Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.
