Position of the course

The overall objective of the course is that the student should get a good understanding of the principles behind R&D and Innovation management in, especially, large established biotech companies, but also in small start-up entrepreneurial companies and with a special focus on academic spin-out companies.

Contents

The course covers the various steps in a business development process based on technological (innovative) ideas or new, company-internal or -external, research results. The course discusses the challenges put on management and founders a research-intensive company. In addition, obstacles and opportunities in bringing a new product to the market are discussed and analyzed.

The course has a focus on R & D and innovation processes in an established, larger company, but also the start-up, entrepreneurial enterprise development problems are covered. Besides theoretical knowledge of innovation processes, the fundamentals of practical project management are taught. The course is a mixture of lectures, seminars, tutorials and limited project assignments.

The course is conducted in close cooperation with experienced entrepreneurs, venture capitalists and business developers who share their experiences from business development in practice.

The course includes the following elements:

- Business mission, business plan, business development
- Early market development
- Financing R&D and new venture development in different business contexts
- Requirements for management in different phases of business and organization development
- Reward systems in knowledge-intensive companies
- Strategic alliances and partnering
- Intellectual property (IPR) and its role in research-based development projects
- R & D and innovation management in the biotechnology industry

Initial competences

Final competences

- 1 able to:describe the different steps in a business development process
- 2 able to:describe the requirements and responsibilities put on management, board members and share holders in different development situations
