

Mollusc and Crustacean Culture (I002791)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size	<i>(nominal values; actual values may depend on programme)</i>		
Credits 5.0	Study time 150 h	Contact hrs	50.0 h

Course offerings in academic year 2022-2023

A (semester 2)	English	Gent
----------------	---------	------

Lecturers in academic year 2022-2023

Nevejan, Nancy	LA22	lecturer-in-charge
----------------	------	--------------------

Offered in the following programmes in 2022-2023

	crdts	offering
Master of Science in Aquaculture	5	A
Exchange Programme in Bioscience Engineering: Agricultural Sciences (master's level)	5	A

Teaching languages

English

Keywords

Culture techniques, biology of shellfish, abalone, oyster, mussel, scallop, clam, penaeids, prawn, lobster, crayfish, crab.

Position of the course

The aim of this course is to teach culture techniques that are commonly applied for the commercial production of crustaceans and molluscs.

The course offers detailed knowledge on various mollusc and crustacean species. Practical classes on mollusc anatomy and freshwater shrimp development are included.

Contents

Crustacean culture

1. General aspects on the production of crustaceans : maturation, reproduction, larval culture, grow-out, feeds
2. Production techniques for penaeid shrimp
3. Production techniques for freshwater prawn *Macrobrachium*
4. Production techniques for lobster
5. Exercise on a penaeid hatchery
6. Practicum identification different larval stages of *Macrobrachium*

Mollusc culture

1. World production of molluscs
2. Abalone culture
3. Anatomy of bivalves with practicum dissection
4. General aspects on the production of bivalves : life cycle, nutritional requirements in different life stages and environmental adaptations of bivalves
5. Exceptional species
6. Common hatchery and nursery systems for bivalves
7. Common grow-out systems for bivalves
8. Impact of bivalve culture on the environment
9. Diseases in cultured molluscs

Initial competences

General biology, chemistry, biochemistry and basic knowledge on aquaculture.

Final competences

- 1 The student has knowledge on the biological requirements of crustaceans and molluscs in commercial production systems.
- 2 The student has technical knowledge on the rearing systems used for crustaceans and molluscs.
- 3 The student has insight into how to start a hatchery or grow-out farm for crustaceans.
- 4 The student is able to identify mollusc organs.
- 5 The student is able to identify different larval stages of freshwater prawn.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Guided self-study, lecture, practicum, seminar: coached exercises

Extra information on the teaching methods

Theory lectures: lectures based on powerpoint presentations and videos.

Practical classes: dissection of bivalves and identification of different larval stadia of *Macrobrachium*.

Exercises: exercise on the starting-up and exploitation of a shrimp hatchery.

Learning materials and price

Printouts of the powerpoint presentation will be available during all classes.

Estimated cost of the printouts: 17 euro (included in fee that is paid in the beginning of the academical year).

Course content-related study coaching

Study guidance upon request by email or on appointment.

Evaluation methods

end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Written examination

Examination methods in case of periodic evaluation during the second examination period

Written examination

Examination methods in case of permanent evaluation

Participation

Possibilities of retake in case of permanent evaluation

examination during the second examination period is not possible

Extra information on the examination methods

Period aligned evaluation: theory: written closed book exam.

Non-period aligned evaluation: practical classes and exercises: participation.

Calculation of the examination mark

Out of 20:

14 points attributed to exam mollusc part

6 point attributed to exam crustacean part

Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.

Students that do not attend the practical classes without a valid reason should retake the

course the next academic year.
