

Diseases in Aquaculture (I002796)

Due to Covid 19, the education and assessment methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size *(nominal values; actual values may depend on programme)*

Credits 6.0 **Study time 180 h** **Contact hrs** 60.0h

Course offerings in academic year 2021-2022

A (semester 1) English Gent

Lecturers in academic year 2021-2022

Bossier, Peter	LA22	lecturer-in-charge
Decostere, Annemie	DIO5	co-lecturer
Dewulf, Jeroen	DIO8	co-lecturer
Hermans, Katleen	DIO5	co-lecturer

Offered in the following programmes in 2021-2022

	crdts	offering
International Master of Science in Health Management in Aquaculture	6	A
International Master of Science in Marine Biological Resources	6	A
Master of Science in Aquaculture	6	A
Exchange Programme in Bioscience Engineering: Agricultural Sciences (master's level)	6	A

Teaching languages

English

Keywords

Bacterial, parasitic and viral diseases, antibiotics, antibiotic resistance, identification and enumeration of micro-organisms, virulence, probiotics, immunostimulants, vaccination, handling & sampling techniques.

Position of the course

The aim of the course is to understand the importance of microbial, viral and parasitic diseases in aquaculture, how to enumerate micro-organisms, to convey methodologies to prevent, to cure microbial diseases and how to handle, manipulate and sample fish.

Contents

1. Bacterial morphology
2. Enumeration methods for bacteria (including PCR, ELISA)
3. Antibiotics and antibiotic resistance, vaccination and immunostimulants in aquaculture
4. overview of a selection of relevant aquatic animal diseases
5. Hygiene and sanitation
6. probiotics
7. Case studies of marine fish hatcheries, including vaccination protocols
8. Handling/sampling techniques
9. Basic principles in epidemiology and ethical issues
10. Practical lab work on bacterial antibiotics susceptibility, bacterial plasmid conjugation, quorum sensing, bacterial virulence factors. Practical work on clinical investigation of fish

Initial competences

General biology, chemistry, biochemistry and basic knowledge on aquaculture.

Final competences

- 1 The student has insight into microbial morphology.
- 2 The student has insight into techniques to enumerate bacteria.
- 3 The student has knowledge on aquatic animal diseases and their causative/eliciting agents.

- 4 The student has insight into the pathogenesis of microbial diseases.
- 5 The student has insight into the importance of hygienic techniques in an aquaculture environment.
- 6 The student understands techniques for disease prevention, including the use of probiotics, immunostimulants and vaccines.
- 7 The student understands techniques for disease mitigation such as the use of antibiotics and bacteriophages.
- 8 The student has knowledge on handling and sampling techniques.
- 9 The student is able to enumerate aquaculture pathogens.
- 10 The student is able to determine antibiotic resistance transmission among bacterial species.
- 11 The student has knowledge on basic principles in epidemiology and ethical issues

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Practicum, Lecture

Extra information on the teaching methods

Theory lectures: lectures based on powerpoint presentations.

Practical classes: microbiological experiments on antibiotic susceptibility, bacterial conjugation, virulence factors and quorum sensing in small groups.

Learning materials and price

Printouts of the powerpoint presentation will be available during all classes.

Estimated cost of the printouts: 17 euro (included in fee that is paid in the beginning of the academical year).

Course content-related study coaching

Study guidance upon request by email or on appointment.

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written examination

Examination methods in case of periodic assessment during the second examination period

Written examination

Examination methods in case of permanent assessment

Report, Participation

Possibilities of retake in case of permanent assessment

examination during the second examination period is possible

Extra information on the examination methods

Period aligned evaluation: theory: written closed book exam.

Non-period aligned evaluation: practical classes: participation and report.

Calculation of the examination mark

Out of 20:

15 points attributed to written exam

5 attributed to report on practical classes

Students that do not attend the practical classes without a valid reason, should retake the course the next academic year.

Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.
