

Applied Marine Fish Larviculture (I002855)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size	<i>(nominal values; actual values may depend on programme)</i>		
Credits 3.0	Study time 90 h	Contact hrs	30.0 h

Course offerings in academic year 2022-2023

A (semester 2)	English	Gent
----------------	---------	------

Lecturers in academic year 2022-2023

Bossier, Peter	LA22	lecturer-in-charge
----------------	------	--------------------

Offered in the following programmes in 2022-2023

Master of Science in Aquaculture	crdts	offering
	3	A

Teaching languages

English

Keywords

Hatchery, fish larva, live food, Artemia, rotifer, cyst, quality control

Position of the course

The aim of this course is to provide knowledge on practical applications of live food in marine fish larviculture. This is mainly achieved by a number of practical classes and hands-on exercises, related to the laboratory culture of fish larvae and the use of live food

Contents

1. Design and practical application of a larval fish feeding regime; assessment of fish larval performance
2. Quality control in live food commercial products, especially Artemia cysts
3. Methodologies for practical application of Artemia in hatcheries
4. Design and practical application of rotifer laboratory cultures

Initial competences

General biology, chemistry, biochemistry and basic knowledge on aquaculture

Final competences

- 1 The student is able to apply practical techniques related to the use of Artemia in larviculture (such as cyst decapsulation, nauplius enrichment, cyst quality control) and can report about them.
- 2 The student is able to run a rotifer batch culture and has insight into rotifer recirculation production systems, and can report about this.
- 3 The student is able to run a larval fish culture at laboratory scale, including aspects such as supply of artificial and live food (calculation of needed amounts of artificial and live food), zootechnical aspects including maintenance of recirculation system, analysis of parameters related to fish larval growth, and is able to report about this in a written report in the format of a scientific paper.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Demonstration, group work, lecture, practicum

Extra information on the teaching methods

Theoretical lecture introduces to a number of practicals, labworks and demonstrations, for which students are organized in groups (with individual report). Depending on the labwork (nature of work and duration of the test, e.g. prolonged fish larviculture test vs. short guided labwork), more or less independent working is required

Learning materials and price

Printouts of the power point presentation are available during all classes.

Estimated cost of the printouts: 10 euro (included in fee that is paid in the beginning of the academic year).

Pdf of the lectures and video clips of specific course contents is available through Ufora

Course content-related study coaching

Study guidance upon request by email or on appointment

Evaluation methods

continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Examination methods in case of periodic evaluation during the second examination period

Examination methods in case of permanent evaluation

Participation, assignment, report

Possibilities of retake in case of permanent evaluation

examination during the second examination period is possible

Extra information on the examination methods

Non-period related evaluation: individual reports of labworks/practicals (including a report in the format of a peer-reviewed paper); participation to labworks/practicals

Calculation of the examination mark

The various labwork/reports together contribute 100% of the total score, second chance exam constitutes an upgraded version of the reports

Students who eschew period aligned and/or non-period aligned evaluations for this course unit may be failed by the examiner.
