Keywords

Sustainability, business economics, ecology, ecological impacts, management, managerial issues, seafood value chain, aquaculture, fisheries, seafood, production, integration

Position of the course

After admission to EM AquaH study program

Continuation course on Aquaculture: Nutrition and Health in Aquaculture; Frontiers in Animal Health

Contents

Through an integrated and interdisciplinary approach, students will be challenged to analyse the sustainability of fish and seafood production.

We question ourselves: what do we define as sustainable?

From a managerial point of view, the conceptual dimensions of sustainability will be discussed.

In terms of ecology, students gain insight in different impact categories of captured and farmed fish/seafood on ecosystems.

Furthermore, the product value chain from feed resource to retailer of fish and seafood products will be analysed, and the economic state of a business and its development will be addressed.

These three disciplines are brought together as students are challenged to develop their own innovation to solve specific aquatic production issues, and test the sustainability and feasibility of their own solution.

Initial competences

Competence for admission to EM AquaH study program

Final competences

- 1 After successful completion of this course students are expected to be able to:
 - analyse the various components of the fish and seafood value chain and its stakeholders;
- 2 apply basic principles of business economics in the fish and seafood sector to assess economic sustainability and to support decision making;
- 3 - illustrate basic managerial and organization characteristics of the fish and

(Approved)

- seafood value chain in relation to a shift in sustainability;
- 4 apply basic principles of ecological sustainability of fish and seafood production in the whole value chain;
- 5 analyse basic concepts of sustainability in the fish and seafood value chain, by applying knowledge on business economics, ecological impacts and managerial issues;
- 6 apply integrated knowledge on economics, ecology and management in a sustainability assessment on a current issue in farmed or captured fish and seafood production.

Conditions for credit contract

This course unit cannot be taken via a credit contract

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Lecture: plenary exercises, Group work, Guided self-study, Excursion, Lecture, Self-reliant study activities

Extra information on the teaching methods

- lectures;
- tutorials;
- case study (in groups);
- field excursions

Learning materials and price

Brightspace, including lecture notes and self-tests, articles, presentations and video clips.

A manual for the practical course and review articles for individual assignments will be provided during the course through Black board. Power point presentations will be uploaded on Brightspace prior to the lectures and whenever possible, lectures will be broadcasted on WURTV or recorded in Teams.

Any additional information about the course will be provided on Brightspace

References

Will be available through Brightspace, Learning Management System of Wageningen

Course content-related study coaching

Teaching support by teachers, PhD students and industrial partners connected to this course.

Assessment moments

continuous assessment

Examination methods in case of periodic assessment during the first examination period

Examination methods in case of periodic assessment during the second examination period

Examination methods in case of permanent assessment

Report, Written examination, Written examination with multiple choice questions, Written examination with open questions, Assignment

Possibilities of retake in case of permanent assessment

examination during the second examination period is possible

Extra information on the examination methods

- written digital exam, counting for 50% of the final grade (open and closed questions);
 - case study report, counting for 30% of the final grade;
 - case study poster presentation, counting for 10% of the final grade;
 - excursion assignment, counting for 10% of the final grade;
- Each component must be scored a 5.5 at least in order to pass the course

Calculation of the examination mark

The normal grades are between 0-10 and 6 ECTS achieved if passed (>5.5)
