Keywords

Pig farming, cattle farming, dairy farming, beef cattle, farm management, animal welfare, animal health, animal genetics, sensor technology.

Position of the course

The goal of this course is to provide insight into the scientifically based management of integrated pig and cattle activities on farms to optimize zootechnical and economic performance, taking into account environmental impact and animal welfare.

Contents

In this course, the parameters important for the profitability of pig farming, as well as dairy and beef cattle farming are covered, taking into account product quality, environmental impact, and animal welfare:

Piglet production, rearing of piglets to young sows, rearing of boars and the use of AI (Artificial Insemination), selection and breeding programs, production of fattening pigs, healthcare and hygiene;

Rearing of young cattle, selection and breeding programs (overview of the main cattle breeds and use of crossbreeding, organization of cattle improvement), welfare and health of cattle, drafting and monitoring of farm protocols;

Introduction to poultry farming: structure of the production chain, broiler production, egg production.

In addition to the zootechnical aspects, attention is also given to the end product, namely carcass and meat quality for pig and beef production, and the quality and quality deviations of milk for dairy production.

During the exercises, visits are made to practical farms, allowing students to test the theory against practice. In addition to this, students will also immerse themselves in the sector's professional literature to gain a better understanding of the various actors in animal production, current affairs, and future trends.

Initial competences

This course builds on certain final competences of the course 'Animal Physiology', 'Animal Digestion Physiology' and 'Animal Reproductive Physiology'.

Final competences

- 1 Be able to act properly as a manager/advisor in the field of pig and cattle production
- 2 Have in-depth knowledge of both genetics (breeds, crossbreeds) and selection techniques in pigs and cattle.
- 3 Have a knowledge of the prevention and recognition of the most common diseases in pig and cattle farming.
- 4 Have a good knowledge of the farm systems and the management of pig, cattle and poultry farming.
- 5 Being able to assess farm systems in the context of environmental impact, sustainability and animal welfare
- 6 Explain the characteristics that determine the quality of the final animal products and use these when comparing products of widely varying quality.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Continuous opportunity for questions

Assessment moments

end-of-term and continuous assessment

Examination methods in case of periodic assessment during the first examination period

Written assessment with multiple-choice questions, Written assessment with open-ended questions

Examination methods in case of periodic assessment during the second examination period

Written assessment with multiple-choice questions, Written assessment with open-ended questions

Examination methods in case of permanent assessment

Written assessment with multiple-choice questions, Participation

Possibilities of retake in case of permanent assessment

examination during the second examination period is not possible

Extra information on the examination methods

Written exam.

Possible exam questions are partially provided by the students.

Calculation of the examination mark

Theory: 75% - Exercises: 25%

NPGE after 1st semester: 50% of the score

PGE after 2nd semester: 50% of the score

The assessment and determination of the final grade are based on the mathematical average according to the assigned coefficients. If one does not participate in the evaluation of one or more components, or if one scores less than 8/20 (not rounded) on one or more components, passing the course unit is no longer possible. If the final score calculation still amounts to 10 (or more) out of 20, it will be adjusted to 9/20.
