

## Food Chemistry (0000103)

Due to Covid 19, the education and assessment methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

**Course size** *(nominal values; actual values may depend on programme)*

**Credits 5.0**                      **Study time 150 h**                      **Contact hrs**                      60.0h

**Course offerings and teaching methods in academic year 2021-2022**

A (semester 1)	English	Incheon	guided self-study	6.0h
			lecture	24.0h
			practicum	30.0h

**Lecturers in academic year 2021-2022**

Cirkovic Velickovic, Tanja	KR01	lecturer-in-charge
----------------------------	------	--------------------

**Offered in the following programmes in 2021-2022**

	crdts	offering
<a href="#">Bachelor of Science in Food Technology</a>	5	A

**Teaching languages**

English

**Keywords**

Food, Agricultural raw materials, Composition, Properties, Degradation reactions, Nutritional value, Food safety

**Position of the course**

Food chemistry deals with the study of the chemical, biochemical and physicochemical processes involved in agricultural raw materials and in foodstuffs, and during the transformation of agricultural raw materials into derived products. This knowledge is essential for students who want to specialize further as a MSc in Food Technology or MSc in Food Science and Nutrition.

**Contents**

- 1 Introduction and definitions
- 2 Water
- 3 Proteins
- 4 Enzymes
- 5 Lipids
- 6 Carbohydrates
- 7 Vitamins
- 8 Pigments
- 9 Other constituents
- 10 Additives, residues and contaminants

Practical sessions: physicochemical characterization of foods; carbohydrates, proteins, lipids (chemical properties, isolation, reactivity).

**Initial competences**

Basic knowledge of inorganic chemistry, organic chemistry and biochemistry is required.

**Final competences**

- 1 The student will acquire thorough and fundamental knowledge of the chemical properties of and the chemical reactions taking place in agricultural raw materials and their derived products .
- 2 The student will be able to argue analytically and synthetically about chemical properties of and chemical reactions in agricultural raw materials and their

derived products.

3 The student basic knowledge about the chemical analysis of agricultural raw materials and their derived products.

4 The student will be able to collect information about the chemical composition of agricultural raw materials and their derived products, to process this information and to report it and to practice laboratory techniques about the basic chemical analysis of agricultural raw materials and their derived products.

#### **Conditions for credit contract**

Access to this course unit via a credit contract is unrestricted: the student takes into consideration the conditions mentioned in 'Starting Competences'

#### **Conditions for exam contract**

This course unit cannot be taken via an exam contract

#### **Teaching methods**

Practicum, Guided self-study, Lecture

#### **Learning materials and price**

Belitz, H.-D. and Grosch, W. (1999). Food Chemistry, Springer, Berlin, ISBN 3-540-64692-2

#### **References**

#### **Course content-related study coaching**

*Interactive counselling through Minerva. Individual electronic appointment booking*

#### **Assessment moments**

end-of-term and continuous assessment

#### **Examination methods in case of periodic assessment during the first examination period**

Written examination with multiple choice questions, Written examination with open questions

#### **Examination methods in case of periodic assessment during the second examination period**

Written examination with multiple choice questions, Written examination with open questions

#### **Examination methods in case of permanent assessment**

Report, Participation, Written examination with open questions

#### **Possibilities of retake in case of permanent assessment**

examination during the second examination period is not possible

#### **Extra information on the examination methods**

*Following practical session a written report will be submitted for evaluation and it will contribute to the final mark with 10%. Periodic evaluation (twice during the semester) in a form of a written performance assessment test with open questions will contribute to the mark with 10%. Absence from practical session will result in a maximum mark 9/20.*

#### **Calculation of the examination mark**

Written examination with open questions 60%

Written examination with multiple choice questions 20%

Performance assessment 10%

Lab Report 10%
