Trefwoorden

Empirical research; Empirical (bio)ethics; research question development; study design; critical assessment of empirical studies; attitude studies; attitude scales, moral reasoning; moral decision-making; value studies; survey; survey questionnaire construction, moral experiments; qualitative research, interview study, interview guide construction; Socratic questioning; elicitation techniques for moral reasoning; auditing; interdisciplinary data analysis; focus groups, moral dilemma deliberation; narrative analysis; grounded theory; thematic analysis; NVivo; Interpretative Phenomenological Analysis; quantitative research, statistics, data analysis; SPSS; StatXact; integration of empirical research data in normative argumentation.

Situering

This course is one of the eighteen research seminars that constitute the core of the master programme. Depending on initial qualifications, students enrol for three or five such research seminars.

Inhoud

This seminar focuses on empirical research in the field of ethics and involves setting up, implementing, interpreting empirical research and integrating empirical evidence in a normative analysis. Based on the lecturer's experience of different types of empirical research (mainly related to (bio)ethical issues), the students are taught how they can develop an empirical research question and to select an appropriate method that is suitable for collecting empirical data on, for example, moral reasoning or attitudes relating to moral issues. Students are trained to critically assess the quality and value of empirical studies. Finally, the course will provide insight in methods for the integration of empirical research data in normative argumentation and in the debate about (the need for) methods for empirical ethics.

The course will take into account the discipline specific background of the students and provides an opportunity to conduct a small-scale empirical study about a discipline specific moral question.

The students are guided in research tasks related to their study, e.g. the design of the study, the design of a survey questionnaire, the construction of an interview guide for qualitative research on moral decision-making, collection of online data, data analysis, the interpretation of results, a critical reflection about the value and limitations of the study.

Every student has to 1) write a research proposal for an empirical study or write a paper based on an empirical study on a topic of choice (moral sciences) they conducted over the course of the year; 2) present their study (in its final phases) for an audience of scholars. Students will

prepare drafts and/or shorter oral presentations about their work to obtain feedback from the lecturer and/or peers.

According to needs and the progress in the work of the students (and the Covid19-situation), meetings will be held online or on campus meetings.

Begincompetenties

Knowledge of Empirical research for ethics and bioethics at intermediate level.
Competent in philosophical writing and argumentation

Eindcompetenties

- 1 Within the domain of Empirical research for ethics and bioethics:
 - Ability to formulate original and innovative research problems based on the duly founded insight into the internationally recognised state-of-the-art in that domain.
- 2 - Ability to work out original solutions to the selected research problems, and argue for them clearly and convincingly.
- 3 - Ability to deepen one's knowledge of this domain independently.
- 4 - Ability to choose a suitable research method compatible with the research question
- 5 - Ability to report on research designs and outcomes both in writing and orally (for academic peers) in a clearly-understood manner.

Creditcontractvoorwaarde

Dit opleidingsonderdeel kan niet via creditcontract gevolgd worden

Examencontractvoorwaarde

Dit opleidingsonderdeel kan niet via examencontract gevolgd worden

Didactische werkvormen

Hoorcollege

Leermateriaal

Reader with articles, book chapters and other material available via Ufora. The reading material will cover examples of empirical research, methodology of empirical research, methodology of integration of empirical research data in moral argumentation, and the debate about empirical research for ethics and bioethics.

Vakinhoudelijke studiebegeleiding

The lecturer offers individual supervision: via face-to-face meetings and e-mail contact.

Evaluatiemomenten

periodegebonden en niet-periodegebonden evaluatie

Evaluatievormen bij periodegebonden evaluatie in de eerste examenperiode

Werkstuk

Evaluatievormen bij periodegebonden evaluatie in de tweede examenperiode

Werkstuk

Evaluatievormen bij niet-periodegebonden evaluatie

Vaardigheidstest, Participatie, Werkstuk

Tweede examenkans in geval van niet-periodegebonden evaluatie

Niet van toepassing

Toelichtingen bij de evaluatievormen

Permanent evaluation: oral presentation of research results, participation in discussions during (online) seminars.

End-of-term evaluation: paper assignments, written research reports, presentation.

Feedback on the exercises will be provided immediately following the sessions or through (online) individual progress discussions (appointment).

Eindscoreberekening

Permanent evaluation: 40%

End-of-term evaluation: 60%

Faciliteiten voor werkstudenten

Given the small group, classes and meetings are scheduled with input of all students.
Feedback is possible outside office hours.
